EMPLOYMENT AND PAYROLLS

WITH AVERAGE WEEKLY EARNINGS

JANUARY 1963

Published by Authority of
The Minister of Trade and Commerce

April 1963 8003-501 Price \$3.00 per year 30 cents per copy

Volume 41, No. 1

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001-Advance Statement on Employment and Weekly Earnings-Monthly-Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year (industry and area averages of hours per week, hourly and weekly wages, with

comparisons from a month and a year earlier, and certain historical comparisons; that sand explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 — Earnings and Hours of Work in Manufacturing — Annual — Preliminary Report — Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)
- 72-502 Labour Income, 1926-58 Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

A COUNTY OF THE PROPERTY OF TH	

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, JANUARY, 1963

Summary

The industrial composite index of employment (1949=100) declined less than seasonally from December to January. The January index at 117.8 was down 2.0 p.c. from December. An above-average increase in manufacturing and a smaller-than-usual decline in construction were the chief factors moderating the decline. Forestry was the only industry which recorded a larger-than-average reduction. Seasonally adjusted, the industrial composite rose over the month by 0.8 p.c. to 123.3.

The adjusted indexes for both major divisions of manufacturing advanced. In durables, employment rose strongly in wood and in iron and steel products, while in electrical apparatus and supplies there was an increase instead of the usual seasonal decline. In non-durables, the resumption of operations in a few large tobacco-processing plants after temporary layoffs during the last half of December was a factor in the advance.

The industrial composite of average weekly wages and salaries for January at \$81.87 was \$3.42 above the December figure. A large rise at this time is usual since average earnings in December tend to be low due to short time during the Christmas season. Per capita earnings were \$2.59 higher than in January 1962.

The payroll index rose by 2.3 p.c. over the month to 226.5 in January. The latest index was 5.6 p.c. above the same month last year.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing rose by 0.6 p.c. to 114.9 from December to January. The latest index was 2.6 p.c. above the high for the last few years recorded in October 1959 but was considerably below the maximum for the post-war period recorded in the winter of 1956-57. The rise in January reflected advances in both major divisions; employment in durables rose by 0.4 p.c. to 120.1 and in non-durables, by 0.8 p.c. to 110.6.

The rise in <u>durable goods manufacturing</u> was characteristic of the strength shown in that division since the low of 108.1 recorded in March 1961. Over the succeeding period the index has risen by 11.1 p.c., an average monthly growth of 0.5 p.c. All major industry groups have shared in this advance except non-ferrous metal products, which showed a mild upward trend from March 1961 to July 1962 but lost ground during the remainder of 1962.

The December to January rise in <u>durables</u> reflected larger-than-usual gains in wood and in iron and steel products and a contra-seasonal increase in electrical apparatus and supplies. The expansion in these industries more than offset an above-average decline in non-metallic mineral products.

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

In iron and steel products, all component industries strengthened except agricultural implements, which recorded a smaller-than-usual increase. In transportation equipment, there was continued expansion in the motor vehicle parts and accessories industry but this was offset by a contraction in railroad and rolling stock equipment.

In non-durable goods manufacturing, the marked increase in the adjusted index reflected in part a large rise in tobacco products as a few large processing plants recalled employees temporarily laid off in December. However, advances in clothing, textiles and leather products and a smaller-than-usual decrease in food and beverages also contributed to the overall increase.

Non-Manufacturing Industries

In the goods-producing industry divisions, the seasonally-adjusted indexes for mining and construction rose while that for forestry fell. The increase in mining was small and was due to strengthening in the metals group. Construction recorded a marked advance which may partly reflect changing seasonal
patterns. During the last two years the winter decline in construction employment
has been relatively mild, suggesting an increasing tendency for firms to extend their
operations throughout the year.

In the service-producing sector, the adjusted indexes of most divisions rose, although the advance in trade and transportation, storage and communication was slight. The largest percentage increase occurred in public utility operation and reflected mainly a contra-seasonal rise in that division in Ontario.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries at \$81.87 was up \$3.42 from December. A large rise usually occurs at this time because average earnings tend to be low in December due to short-time during the Christmas season. The latest figure was \$2.59 above the same month last year.

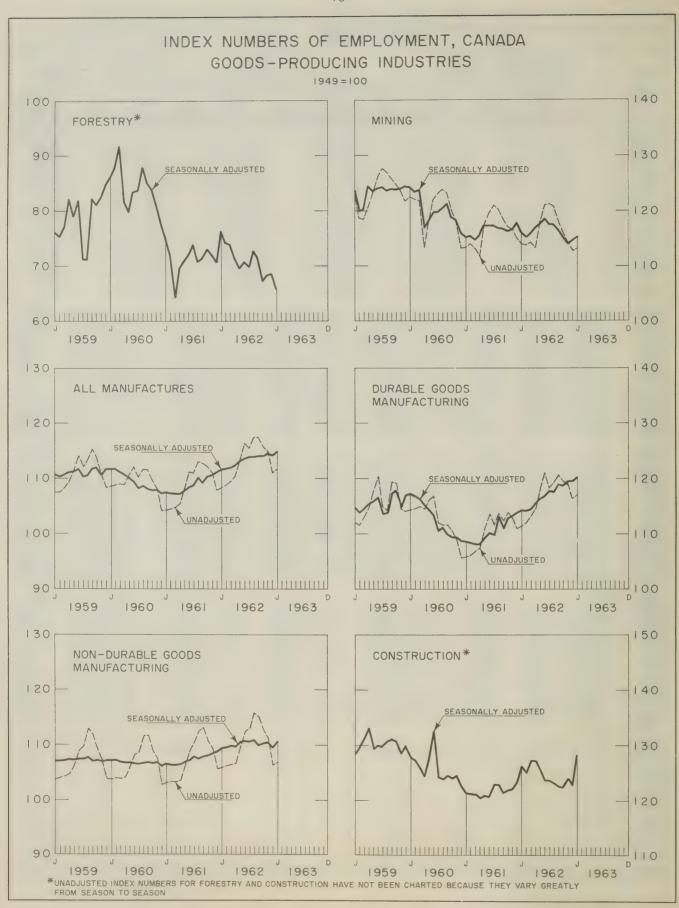

The rise in the composite reflected increases of \$6.05, \$4.30 and \$10.62 in mining, manufacturing and construction, respectively. The advances in these divisions were due to the Christmas effect mentioned above. An additional factor, contributing to the rise in the composite was extensive seasonal layoffs of casual employees in trade who had been taken on in November and December at below-average rates.

NOTICE TO USERS OF

EMPLOYMENT AND PAYROLL

MAN-HOURS AND HOURLY EARNINGS STATISTICS

The Employment Section of the Dominion Bureau of Statistics wishes to alert all users of these statistics to a revision programme which will effect them in the next four months. This programme will result in all indexes being placed on a 1961=100 time base and all industry-classified employment and payroll data being compiled on the 1960 Standard Industrial Classification. The current statistics are on a 1949=100 time base and the 1948 Standard Industrial Classification.

Our time-table calls for the January 1966 survey to be carried out on the revised basis, with the published results available about mid-April, the normal release date for January survey results. At the same time we will publish, in a separate document, historical data, monthly and annually, from 1961-65, inclusive, on the revised basis, in order to provide users with comparative data with which to evaluate the effect of these revisions. By June 1966 we will provide a second publication containing further historical data on a revised basis monthly and annually for 1957-60, inclusive. This publication will also contain a comprehensive technical paper covering all aspects of the revision programme.

It is anticipated that for most industries, the effect of using the 1960 Standard Industrial Classification in place of the 1948 Standard Industrial Classification will have little or no effect on such statistics as average weekly wages and salaries and average hourly earnings. However, it is quite possible that the effect will be of more consequence for a relatively small number of industries. Included in this group may be such industry classifications as durable goods, as well as some of its component industries. In those industries where the effect is at all significant we will provide full documentation of the factors involved.

As part of the revision programme, it is also planned to provide more industrial and geographical detail on a regular monthly basis, commencing with the January 1966 publication.

If you wish to have any additional information on the points covered in this notice, please address your enquiries to Chief, Employment Section, Labour Division, Dominion Bureau of Statistics, Ottawa. We shall be happy to hear from you.

AUX UTILISATEURS

DE LA STATISTIQUE DE L'EMPLOI ET DE LA PAIE,

DES HEURES-HOMME ET DU GAIN HORAIRE

La Section de l'emploi du Bureau fédéral de la statistique désire attirer l'attention de tous les utilisateurs de la statistique ci-dessus mentionnée sur un programme de revision qui les touchera durant les quatre prochains mois. En vertu de ce programme, tous les indices seront fondés sur une base temporelle de 1961 = 100 et toutes les données de l'emploi et de la paie classées par industrie seront calculées d'après la Classification des industries de 1960. La statistique actuelle se fonde sur la base temporelle de 1949 = 100 et sur la Classification des industries de 1948.

Notre calendrier demande que le relevé de janvier 1966 se fasse d'après la base revisée et que les résultats en soient publiés à la date normale, vers la mi-avril. Nous publierons aussi dans un document à part, des données récapitulatives mensuelles et annuelles pour 1961-1965 afin de fournir aux utilisateurs des chiffres comparables qui leur permettront d'évaluer les effets des revisions. En juin 1966, nous publierons un second rapport contenant d'autres données récapitulatives mensuelles et annuelles revisées pour 1957-1960. Cette publication contiendra aussi un communiqué technique complet couvrant tous les aspects du programme de revision.

On prévoit que dans le cas de la plupart des industries l'emploi de la Classification type des industries de 1960 plutôt que celle de 1948 n'aura que peu ou pas d'effets sur la statistique des salaires et traitements hebdomadaires moyens ni sur la rémunération horaire moyenne. Il se peut fort bien, toutefois, que l'effet ait plus de conséquence dans le cas d'un nombre relativement peu élevé d'industries, dont probablement les industries de biens durables et de leurs industries constituantes. Dans les industries oû l'effet revêt quelque importance nous fournirons une documentation complète sur les facteurs présupposés.

Comme partie du programme de revision, nous nous proposons, à compter de la publication de janvier 1966, de donner régulièrement chaque mois plus de détails d'ordre industriel et géographique.

Si vous désirez de plus amples renseignements au sujet de ce qui précède, prière d'adresser vos demandes au Chef de la Section de l'emploi, Division du travail, Bureau fédéral de la statistique, Ottawa. Nous serons heureux de vous répondre.

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated,

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differen-

tials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, for period's differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 - Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours, Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

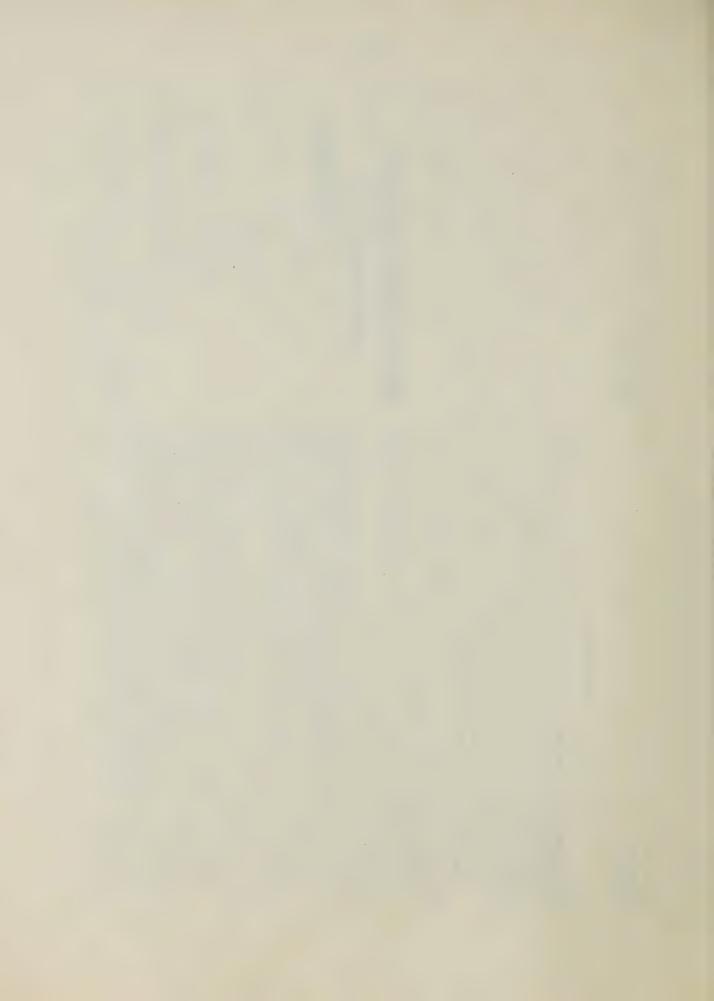

Question 6.7.8 - State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics **EMPLOYMENT SECTION**

OTTAWA

8003-3.2: 26-3-62

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants. recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	24
Nova Scotia	51
New Brunswick	50
Quebec	62
Ontario	68
Manitoba	61
Saskatchewan	39
Alberta	51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND PAYROLLS

WITH AVERAGE WEEKLY EARNINGS

FEBRUARY 1963

Published by Authority of
The Minister of Trade and Commerce

May 1963 8003-501 Price \$3.00 per year 30 cents per copy

Volume 41, No. 2

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72 - 001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006-Hiring and Separation Rates in Certain Industries-Semi-Annual-Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, FEBRUARY, 1963

Summary

The February industrial composite index of employment (1949=100), at 117.3, was down 0.4 p.c. from January. Industrial activity is usually at its lowest ebb during these months so that a small decline is typical. Seasonally-adjusted, the February index was almost unchanged at 123.2. In general, the adjusted indexes for the major industrial divisions also showed little change. An exception was a decline in construction.

The industrial composite of average weekly wages and salaries rose by 86 cents to \$82.77 in February. The latest per capita figure was \$2.56 above February 1962. The payroll index for February, at 228.0, was 0.6 p.c. above January 1963 and 5.5 p.c. above February 1962.

Employment

Manufacturing

The past nine months has seen continued growth in the manufacturing division although at a reduced rate from that in the first half of 1%2. This continued expansion has reflected steady growth in the durables component; non-durables has shown little movement since June due partly to a prolonged industrial dispute in that division.

The February seasonally-adjusted employment index for <u>durable goods</u> <u>manufacturing</u>, at 119.8, was 2.4 p.c. above the June 1962 index of 117.0. The growth evidenced by this division reflects continuing expansion in iron and steel products, wood products and electrical apparatus and supplies. Non-metallic mineral products weakened in the first quarter of 1963 although the industry advanced throughout 1962. Transportation equipment showed little change after the 3rd quarter of 1962, as expansion in the automobile industry and shipbuilding and repairing was offset by a contraction in aircraft and parts.

Between January and February the only change of note in the durables division was a smaller-than-seasonal increase in transportation equipment. This movement reflected a decline in railroad and rolling stock equipment and a smaller-than-usual rise in shipbuilding and repairing. Only the motor vehicles industry made a significant advance in February.

Since June 1962 the seasonally-adjusted employment index for non-durable goods manufacturing has fluctuated at about 110.5. During this period most industry groups have shown some weakening. Only rubber products and miscellaneous industries has continued to show a fairly consistant upward trend. Textile products improved slightly after June 1962 largely because of a expansion in synthetic textiles and silk. Employment in paper products advanced until about the beginning of the 4th quarter and then slackened. The employment trend in chemical products was obscured by a prolonged industrial dispute; a settlement reached in February 1963 was the main factor in the rise in the seasonally-adjusted index for non-durables

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

during that month.

Non-Manufacturing Industrial Divisions

The seasonally-adjusted indexes for the remaining goods producing industries have shown varied trends since June 1962. Forestry has generally decreased. Mining declined steadily from June to November but since that time has remained close to the November level; all component industries have reflected this weakening although it was most pronounced in metals. Construction declined until about October 1962 but has shown signs of expansion in recent months.

In the service-producing industries, employment has advanced steadily in finance, insurance and real estate, and in service. The overall picture in trade also has been one of expansion although there appeared to be some weakening in the retail sector during the third quarter.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries rose by 86 cents over the month to \$82.77 in February. Increases were recorded in all major industrial divisions with forestry, transportation, storage and communication and construction showing the greatest gains.

Manufacturing rose by 22 cents to \$85.34 in February 1963. Both the durable and non-durable components of manufacturing showed increases although the rise in durables was fractional. In durables there were increases in wood and iron and steel products but these gains were largely offset by declines in the remaining industry groups.

The industrial composite of average weekly earnings for February was \$2.56 above the same month last year. More than half of the major industrial divisions showed year-to-year gains which exceeded the rise in the composite.

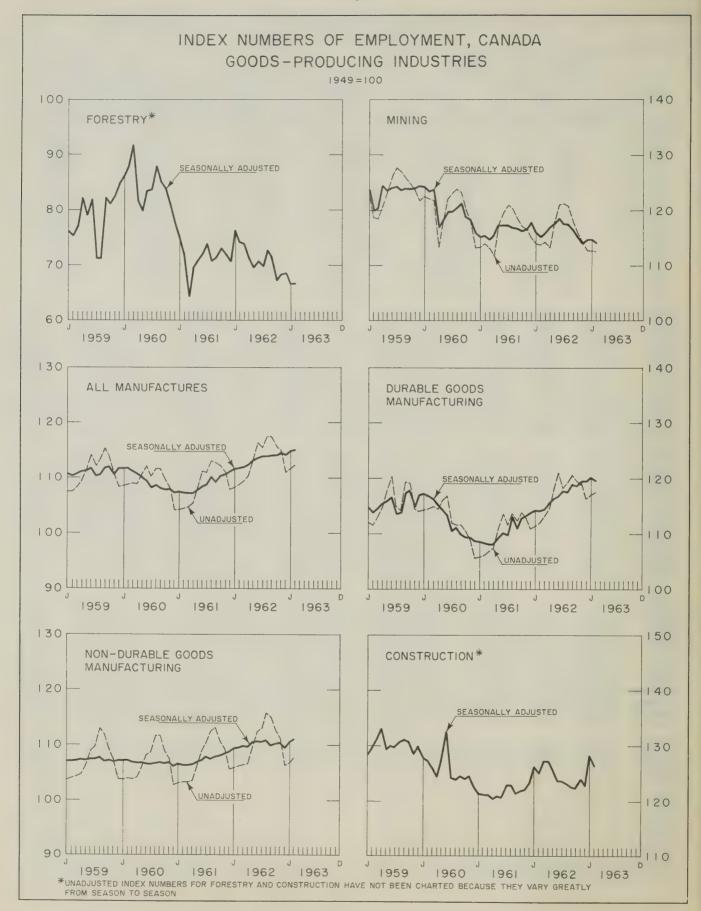

Mining (\$3.96) and construction (\$3.60) recorded the largest year-to-year gains.

INSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month, If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees; including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees, last pay periods in month, with totals in C.

Question 3 — Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 - Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6.7.8 - State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

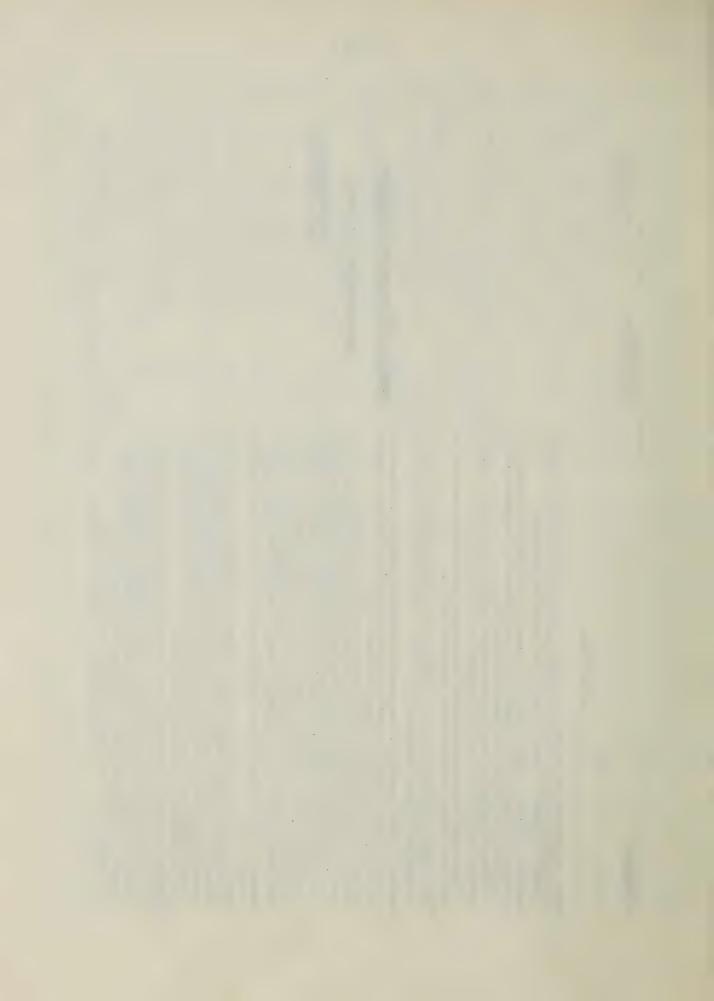

If further directions are required, please write the Employment Section.

EMPLOYMENT SECTION

OTTAWA

8003-3.2: 26-3-62

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland Prince Edward Island Nova Scotia New Brunswick Quebec Ontario	
Manitoba Saskatchewan Alberta British Columbia	39 51 61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month. fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

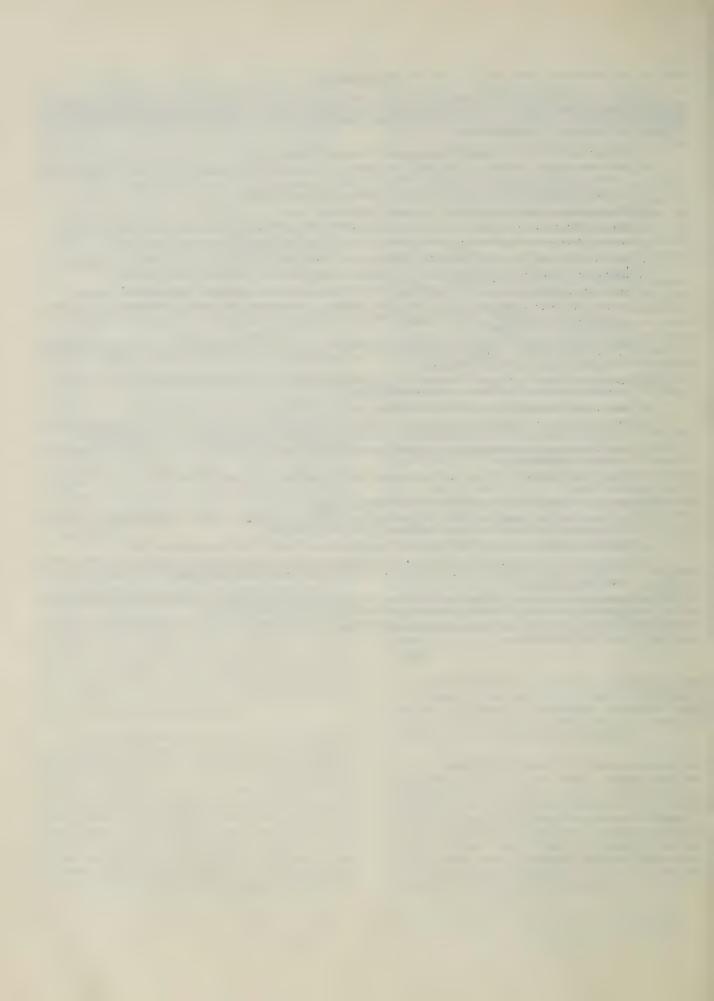

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) **Durable goods manufacturing** includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 — Hiring and Separation Rates in Certain Industries — Semi-Annual — Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201-Review of Employment and Payrolls-Annual-Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72 - 202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203-Earnings and Hours of Work in Manufacturing-Annual-Preliminary Report-Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, MARCH, 1963

Summary

The industrial composite index of employment (1949=100) for March, at 117.7, was slightly higher than for February. There were moderate increases in most major industrial divisions reflecting the seasonal upswing which usually occurs at this time. Only forestry and mining declined; however, the reduction in forestry was comparatively small.

Seasonally-adjusted, the composite rose by 0.2 p.c. from the previous month to 123.4 in March. There were advances in the adjusted indexes for forestry, non-durable goods manufacturing, construction, service and finance, insurance and real estate. The only significant decline was in transportation, storage and communication.

The industrial composite of average weekly wages and salaries rose to \$82.98 in March, ll cents above February and \$2.57 above March 1962. The payroll index for March, at 229.3, was 0.4 p.c. above February 1963 and 5.4 p.c. above March, 1962.

Manufacturing

The seasonally-adjusted index of employment for manufacturing edged upward in March largely due to strengthening in the non-durables division. The adjusted index for durable goods manufacturing declined.

Employment in manufacturing advanced from the middle of 1962 to the end of the year largely because of expansion in the durables sector. Over most of the same period the non-durables component tended to weaken. During the first quarter of 1963, however, employment in the durables component slackened and expansion in non-durables maintained the level of employment in the aggregate.

The seasonally-adjusted index for <u>durable goods manufacturing</u> declined from 119.8 in February to 119.4 in March. The reduction reflected smaller-than-seasonal increases in iron and steel products and in transportation equipment; a small decrease in wood products also occurred instead of the usual February to March rise. Partially offsetting these influences were larger-than-usual advances in non-ferrous metal and non-metallic mineral products, the rise in the former being due to the settlement of a major industrial dispute.

In transportation equipment, only the motor vehicles industry showed an improvement over February. However, this gain was more than offset by a contraseasonal decline in railroad and rolling stock equipment and smaller—than—seasonal increases in motor vehicle parts and accessories and in shipbuilding and repairing. The small size of the advance in iron and steel products was due mainly to the absence of the usual February—to—March rise in primary iron and steel.

The increase in the seasonally adjusted index for non-durable goods manufacturing reflected improvement in most major industrial groupings but a major

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

factor was the continuation of the tobacco processing season through March. Generally, there is a large seasonal decline in tobacco processing at this time. Occasionally, however, winter processing is late getting underway; during such periods the season may extend to April as was the case this year.

Non-Manufacturing Industries

For the remaining goods-producing industrial divisions the seasonally-adjusted indexes for forestry and construction rose over the month while that for mining showed a small decline. The increase in construction was largely due to an above-average advance in the building and general engineering component. Among the service industries, only the adjusted indexes for service and finance, insurance and real estate rose over the month. The adjusted indexes for the remaining divisions declined with the largest decrease occurring in transportation, storage and communication. In the last named division, the decline reflected, mainly, a contraseasonal reduction in railway employment.

Average Weekly Wages and Salaries

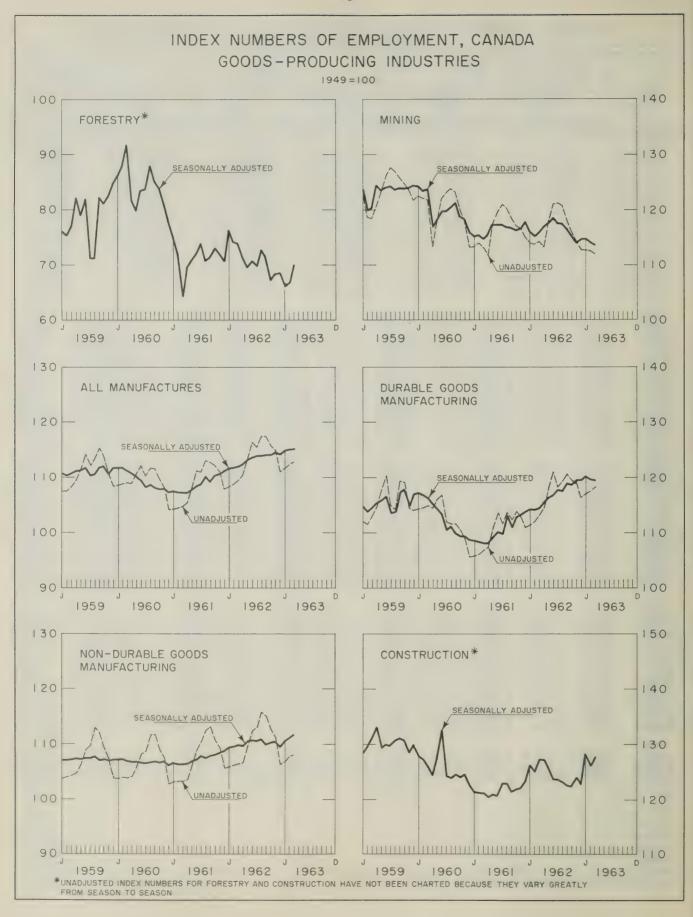

The industrial composite of average weekly wages and salaries for March, at \$82.98, was up 11 cents from February. A majority of the industrial divisions showed increases; the only substantial decline occurred in mining. The largest rise was in forestry where per capita earnings were up \$4.93 from February. Average earnings generally rise sharply in this division in March, with the release of many seasonal workers in the Atlantic Region and Quebec. Manufacturing rose by 51 cents to \$85.92 as the durable and non-durable components recorded increases of 60 and 42 cents, respectively. In durables, there were gains of \$1.00 or more in transportation equipment and in non-metallic mineral products, as both industries showed a longer work week in March.

INSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working

foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 - Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6-7-8 – State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION

OTTAWA

8003-3.2: 26-3-62

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	
Nova Scotia	51
New Brunswick	50
Quebec	62
Ontario	68
Manitoba	61
Saskatchewan	39
Alberta	51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

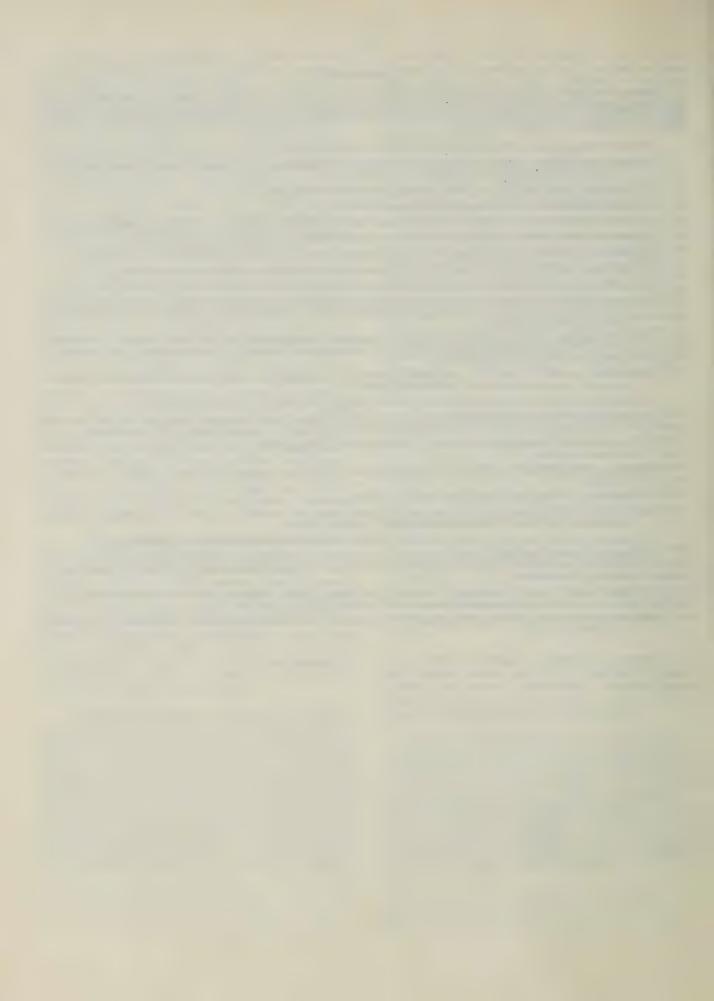

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

Volume 41, No. 4

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72 - 001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006-Hiring and Separation Rates in Certain Industries-Semi-Annual-Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201-Review of Employment and Payrolls-Annual-Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72 - 202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

NOTE: The seasonally-adjusted employment index numbers shown in Table 2 have been revised. Revised figures for 1958 and 1959 have also been prepared, and will be published in the 1962 issue of the Review of Employment and Payrolls.

NOTE: Seasonally-adjusted index numbers of employment for the provinces are now published regularly, commencing with the April 1963 issue.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, APRIL, 1963

Summary

The industrial composite index of employment (1949=100) for April at 119.1 was up 1.2 p.c. from March as seasonal factors led to increases in activity in many establishments. As usual at this time of year, a large proportion of the increase occurred in construction and in transportation, storage and communication. The rise in the latter division in part reflected the opening of the navigation season in Quebec and Ontario. There were increases in the industrial composite indexes of employment for all provinces except New Brunswick and Alberta.

Seasonally-adjusted, the Canada industrial composite index of employment made a small advance from 123.6 in March to 123.8 in April. A decline in forestry reflected larger-than-usual decreases for that division in Ontario. Both durable and non-durable goods manufacturing strengthened from March to April, thereby advancing the total manufacturing index from 115.5 to 116.1. The percentage changes in the remaining industrial divisions were small.

There were declines in the seasonally-adjusted indexes for Nova Scotia and Alberta. In each case, a smaller-than-usual increase in construction was a major factor in the decrease. The adjusted index for Ontario rose from 126.0 to 126.6 in April as manufacturing and construction strengthened. There were no significant changes in the adjusted indexes for the remaining provinces.

The industrial composite of average weekly wages and salaries at \$83.55 was up 62 cents from March 1963 and \$3.34 from the same month last year. The payroll index for April was 233.9. This figure was 2.1 p.c. above the per capita figure for the previous month and 6.4 p.c. above that for April 1962.

Employment

The seasonally-adjusted index of employment for manufacturing rose to 116.1 in April, up 0.5 p.c. from the March figure of 115.5. The manufacturing index advanced steadily in the first quarter of 1963. This expansion was largely a result of renewed vigour in the non-durables component. The index for durables showed little variation in the first three months of the year, but rose by 0.6 p.c. from March to April.

The seasonally-adjusted index for <u>durable goods manufacturing</u> rose from 120.0 in March to 120.7 in April. The latest index was the highest for recent years but was still considerably below the peak of 129.1 recorded in the winter of 1956-1957. The latest advance was due to above-average increases in iron and steel products and transportation equipment. The decrease in wood products and the increases in the remaining industry groups were seasonal

The March to April increase in the adjusted <u>non-durables index</u> marked the sixth consecutive month-to-month increase for this series. During the period the index rose by 2.0 p.c. Major factors in this advance included expansion in the

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

apparel industries and in chemical products. The latter industry picked up strongly after settlement of a prolonged industrial dispute in February. The advance also reflects a shift in the seasonal pattern of tobacco products. Employment has been higher than usual in this industry since January as some establishments carried out processing operations that were delayed as a result of shut-downs in December.

Non-Manufacturing Industries:

Declines occurred in the seasonally-adjusted indexes for the remaining goods producing industries. A larger-than-seasonal decrease in Ontario was a factor in the decline in forestry. There were reductions in construction as improvement in building was outweighed by slackening in other components. The adjusted indexes for the service-producing industrial divisions showed mixed trends. There were increases in trade and public utility operations but small declines in the remaining divisions.

Regional Employment:

The seasonally-adjusted indexes for Quebec and Ontario advanced slightly from March to April while those for British Columbia, the Prairie Region and the Atlantic Region declined. In Quebec, there was strengthening in most industrial divisions but this was partially offset by smaller-than-usual advances in transportation, storage and communication and in construction. In transportation, the increase resulting from the opening of the navigation season was below average; in construction there was only a moderate rise in the highway component whereas in previous years the March to April increase has been larger. In Ontario, there was improvement in manufacturing, construction and trade but weakening in forestry.

A decrease in the seasonally-adjusted composite index for the Atlantic Region reflected declines in the adjusted indexes for Nova Scotia and New Brunswick. A large part of the reduction was in Nova Scotia where a smaller-than-usual increase in construction was a factor. A small decline in the Prairie Region reflected weakening in construction in Alberta. There was little change in the adjusted composite index for British Columbia as the major industrial divisions for this province showed changes which did not differ substantially from usual seasonal patterns.

Average Weekly Wages & Salaries

The industrial composite of average weekly wages and salaries rose by 62 cents to \$83.55 in April as per capita earnings in nearly all major industrial divisions advanced. There were increases of \$1.00 or more in forestry, mining, durable goods manufacturing and finance, insurance and real estate. The only decline occurred in construction where there were large increases in the numbers of workers whose average earnings were below the industry average.

Average earnings in forestry rose by \$3.72 from March to April largely because of the release of seasonal workers following the end of the winter cut in Eastern Canada. The rise in durable goods manufacturing reflected increases of \$1.00 or more in transportation equipment, iron and steel and non-ferrous metal products. The large advance in transportation equipment was due to a considerable rise in per capita earnings for the automobile industries as a result of a longer work week combined with increases in the number employed.

INSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods, Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 - Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6.7.8 - State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION

8003-3.2: 15-1-63

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	24
Nova Scotia	51
New Brunswick	50
Quebec	62
Ontario	68
Manitoba	61
Saskatchewan	39
Alberta	51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month. fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b). Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

Volume 41, No. 5

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001-Advance Statement on Employment and Weekly Earnings-Monthly-Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 — Hiring and Separation Rates in Certain Industries — Semi-Annual — Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

NOTE: The seasonally-adjusted employment index numbers shown in Table 2 have been revised. Revised figures for 1958 and 1959 have also been prepared, and will be published in the 1962 issue of the Review of Employment and Payrolls.

NOTE: Seasonally-adjusted index numbers of employment for the provinces are now published regularly, commencing with the April 1963 issue.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, MAY, 1963

Summary

The industrial composite index of employment (1949=100) was 123.4 in May, up 3.4 p.c. from April. Employment rose in all major industrial divisions with over two-thirds of the advance in the goods-producing group.

Seasonally-adjusted, the composite declined from the April figure of 123.9 to 123.5 in May. The reduction reflected decreases in the adjusted indexes of the goods-producing industrial divisions. The most significant decline was in construction where employment in building and in highway, bridge, and street construction advanced less than is usual at this time of year. A small decrease in manufacturing was due to slackening in both major components. In durables, there were smaller-than-usual advances in wood products, transportation equipment and electrical apparatus and supplies. In non-durables there were above average declines in clothing and tobacco products.

The seasonally-adjusted indexes for 6 of the 10 provinces were down from April. In general, the decreases were due to weakening in manufacturing and construction, although in the Atlantic region a smaller-than-usual advance in mining was also a factor.

The industrial composite of average weekly wages and salaries rose by 14 cents to \$83.67 in May. This figure was \$2.88 above that for May 1962. The payroll index for May at 242.3, was 3.5 p.c. above that for April and 5.3 p.c. above that for May 1962.

Employment

The seasonally-adjusted industrial composite index of employment for May at 123.5, was 0.9 p.c. above December 1962. The expansion occurred in manufacturing and in service-producing industrial divisions other than transportation, storage and communication. Forestry has been very erratic over the period while mining has tended to weaken. Construction and transportation, storage and communication rose sharply from December to January then declined.

Manufacturing

The seasonally-adjusted index for manufacturing declined from 116.1 in April to 115.8 in May. The decline contrasts with the situation in the earlier part of 1963 when the index rose steadily from month to month. The May index was 1.2 p.c. above December 1962. About two-thirds of the increase resulted from expansion in non-durables; the adjusted May index for this component at 112.0, was up 1.5 p.c. from December. Over the same period, durables rose by 0.8 p.c. to 120.4.

The seasonally-adjusted index for <u>durable-goods manufacturing</u> showed a small decline from April to May. The decrease was due to smaller-than-seasonal advances in wood products, transportation equipment and electrical apparatus and supplies. There were seasonal increases in iron and steel and in non-

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

ferrous metals and mild strengthening in non-metallic mineral products. The below-average rise in transportation equipment reflected weakening in railroad and rolling stock equipment and in shipbuilding and repairing. There was slight improvement in aircraft and parts.

The seasonally-adjusted index for durables has advanced erratically since December. During the past six months there has been a pick-up in non-ferrous metals and continued expansion in both iron and steel products and electrical apparatus and supplies; transportation equipment has fluctuated at about the December level of employment, while wood products has tended to weaken.

The adjusted index for non-durable goods manufacturing declined in May largely as a result of above-average reductions in tobacco and clothing. In the tobacco industry this year, the heavy layoffs usually occurring in April were delayed until May. The extended processing season was a result of curtailment in primary processing operations in December. Since December 1962, employment has expanded in nearly all components of non-durables. Only leather products has shown no improvement. There have been significant advances in rubber, textiles, clothing and miscellaneous industries.

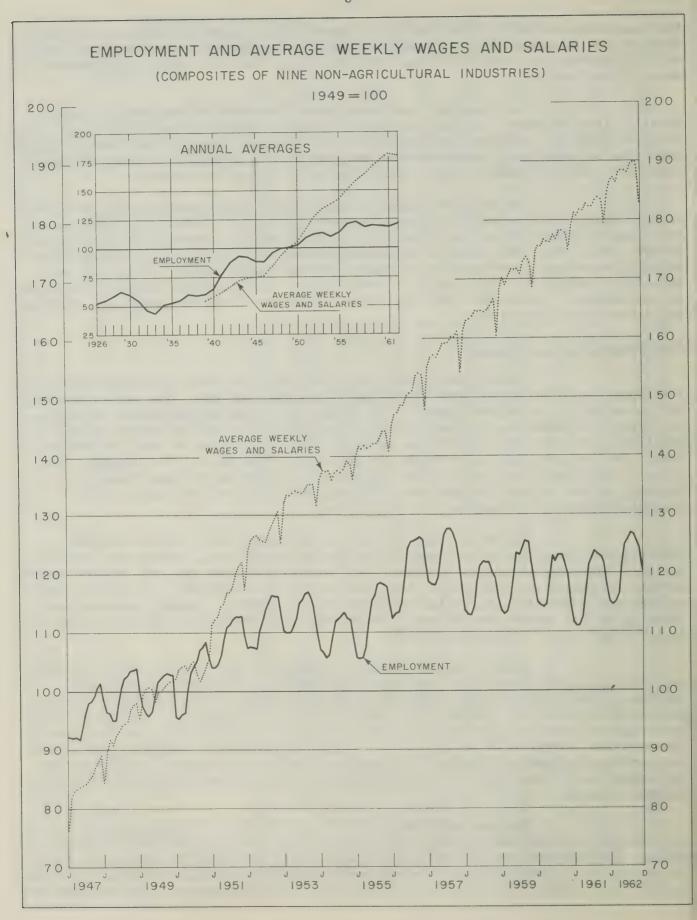

Non-Manufacturing Industries

Forestry employment has shown no clear trend in recent months. The index rose sharply in March but declined in April and May. The contraction was due to weakening in Eastern Canada. The index for mining fell steadily in 1963 as employment slackened in the fuels group. The adjusted index for construction declined in May to 123.4, which was virtually the same figure as that for December 1962. For the past two years there has been some evidence that the seasonal decline in employment in construction has become less pronounced than formerly. However, as the indications are not difinite, no change has been made in the seasonal-adjustment procedures for this reason.

Indexes for all the service-producing industrial divisions advanced from December to May except that for transportation, storage and communication. Continued expansion in trade, in finance, insurance and real estate and in service accounted for almost half the increase in the composite. In transportation, storage and communication, employment rose from December to January then declined steadily as the transportation and storage components weakened. The communication industry has shown continued strength.

The seasonally-adjusted indexes for the Atlantic Region, Quebec and Ontario for May were down from the April figures. The Prairie Region and British Columbia showed small increases. The percentage decreases in the Atlantic Region and Ontario were greater than that in the Canada industrial composite. In both regions there was slackening in construction. In addition, there were smaller-than-seasonal advances in mining in the Atlantic Region and in manufacturing, trade and service in Ontario. However, the seasonally-adjusted indexes in all regions were above their December levels with the Atlantic Region and Ontario showing the largest advance.

The seasonally-adjusted composite index of employment for the Altantic Region declined by 1.4 p.c. to 104.8 in May as employment weakened in mining, and construction. Provincially, the decline reflected reductions in Nova Scotia and New Brunswick where the seasonally-adjusted indexes decreased by 2.8 p.c. and 1.5 p.c., respectively. All provinces were up from December except Nova Scotia.

The seasonally-adjusted index for Quebec at 123.1 was down slightly from April largely as a result of smaller-than-seasonal advances in forestry and construction. Only trade was significantly improved over the month. The remaining industrial divisions recorded changes which conformed to usual seasonal patterns. Since December, employment in Quebec has expanded in trade, finance, insurance and real estate and service and has shown mild improvement in manufacturing. However, these gains have been largely offset by weakening in mining, construction and in transportation, storage and communication.

The adjusted index for Ontario declined from 126.6 to 125.9 between April and May largely as a result of smaller-than-seasonal-advances in manufacturing and construction. The decrease in the composite was the first since December and left the index 1.5 p.c. above the figure for that month. The advance in the early months of 1963 was centered in manufacturing where employment rose strongly in iron and steel products, transportation equipment and electrical apparatus and supplies. Employment has also strengthened somewhat in forestry but weakened in mining and construction. All the service-producing divisions have expanded since December except transportation, storage and communication which has shown little change.

The adjusted index for the Prairie Region at 132.7 was virtually the same as the figure for April, as most industrial divisions recorded changes which did not differ significantly from usual seasonal patterns. Provincially, the adjusted indexes declined in Manitoba and Saskatchewan but rose in Alberta. For the region as a whole there has been no clear trend in 1963. Employment has strengthened in Saskatchewan and to a lesser extent in Manitoba while slackening in Alberta.

In British Columbia, employment advanced by 0.3 p.c. to 118.7 in May. There were above-average increases in trade and service but in general the major industrial divisions reported changes that were in line with usual seasonal movements. The adjusted index for British Columbia has shown little movement in 1963. During this time, employment in public utility operation, in finance, insurance and real estate and in service has expanded; forestry and trade have levelled; manufacturing and construction have tended to weaken.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries was up 12 cents from April to \$83.65 despite a large decline in per-capita earnings in forestry and smaller reductions in mining, public utility operation and in service. Per-capita earnings were virtually unchanged in manufacturing but up \$1.33 in construction. However, substantial increases in employment in these relatively high pay industrial divisions offset losses elsewhere.

There were small to moderate increases in 6 of the 10 provinces from April to May. The increases ranged from 11 cents in British Columbia to 42 cents in Ontario. However, per-capita earnings were lower in each of the four provinces comprising the Atlantic Region.

INSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 — Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6.7.8 — State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION

8003-3.2: 15-1-63

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	24
Nova Scotia	51
New Brunswick	50
Quebec	62
Ontario	68
Manitoba	61
Saskatchewan	39
Alberta	51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

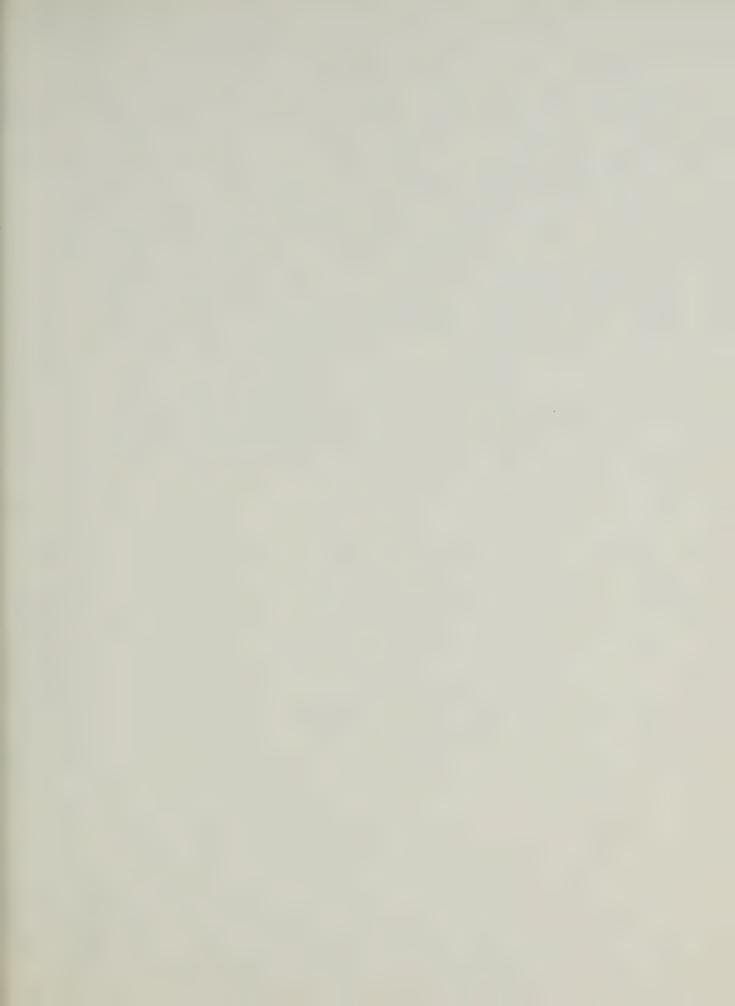

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

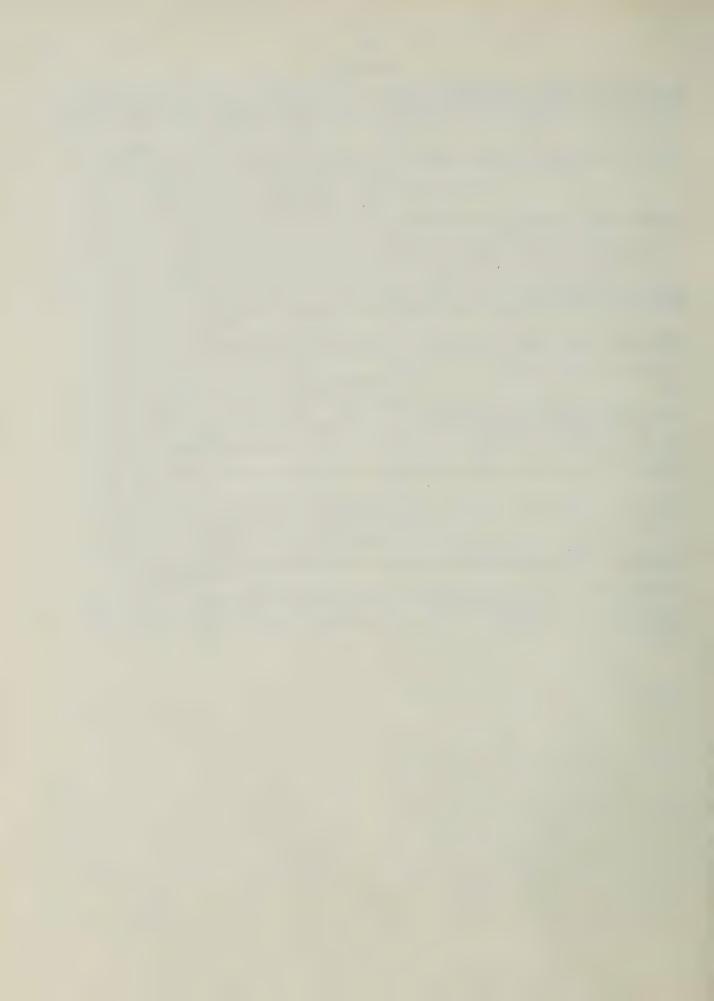

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (S) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

Volume 41, No. 6

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72 - 001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201-Review of Employment and Payrolls-Annual-Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72 - 202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

NOTE: The seasonally-adjusted employment index numbers shown in Table 2 have been revised. Revised figures for 1958 and 1959 have also been prepared, and will be published in the 1962 issue of the Review of Employment and Payrolls.

NOTE: Seasonally-adjusted index numbers of employment for the provinces are now published regularly, commencing with the April 1963 issue.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, JUNE, 1963

Summary

The industrial composite index of employment rose from 123.6 in May to 127.2 in June, an increase of 3 p.c. Employment increased in all provinces, and in each industrial division surveyed. Seasonal influences were the main factors in these changes.

The seasonally-adjusted composite index of employment declined from 123.7 in May to 123.5 in June. Industrially, the most marked change in the adjusted figures was in construction, where the index decreased by 4 p.c. from May to June. There were small declines in the seasonally-adjusted indexes for manufacturing, public utility operation, and transportation, storage and communication; and increases in those for forestry, mining, trade, service and finance, insurance and real estate.

Seasonally-adjusted employment indexes for the Atlantic and Prairie Regions declined moderately, and there were minor reductions in the figures for Quebec and Ontario. The adjusted index for British Columbia did not change from May to June.

The industrial composite figure of average weekly wages and salaries for June was \$83.62, down slightly from the figure for May 1963, and up \$2.57 from that for June 1962. The composite payroll index for June was 249.8, a figure 2.9 p.c. higher than that for May 1963 and 5.0 p.c. higher than the index for June 1962.

Employment

Manufacturing

The seasonally-adjusted employment index for manufacturing, which rose steadily from the spring of 1%1 until early this year, showed little change between April and June. The small decline over the period reflects a prolongation of primary tobacco processing operations into April, which raised the adjusted index for that month slightly above the figures for May and June. But for this factor, the adjusted index for non-durable goods manufacturing would have continued to rise throughout the first half of 1963. The June data indicate that the gradual strengthening trend apparent in almost all non-durable groups persits until the end of the second quarter of the year. The index for rubber products rose less than seasonally from May to June; the industry is amongst those which have appeared to strengthen persistently through the earlier part of 1963.

The adjusted employment index for <u>durable goods</u> manufacturing declined slightly from April to May, and again from May to June. The declines in part reflected the situation in saw and planing mills, shipbuilding, and railroad and rolling stock equipment, where employment conditions tended to weaken throughout the first half of 1963. Less-than-seasonal increases in electrical apparatus and supplies were also a factor in the April to June decline; employment in this industry appeared to strengthen in the earlier months of the year.

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

From 1961 until late in 1962, employment conditions strengthened in almost all durables industries. During the winter of 1962-63, conditions appeared to stabilize in most of these industries. The situation continued to improve during the second quarter of 1963 in a few industries, notably the motor vehicle industries and iron castings; weakness became apparent in the small number of cases previously mentioned.

Non-Manufacturing Industries

The seasonally-adjusted index for forestry moved upwards from May to June. Moderate changes in this erratic index are of little significance. The adjusted index for mining, which declined fairly consistently from the middle of 1962 until this May, advanced from May to June. However, the rise was slight. The adjusted construction index declined substantially over the month; employment indexes for the industry rose less than seasonally in all regions.

The seasonally-adjusted indexes of employment for trade, service and finance, insurance and real estate continued to rise between May and June. The adjusted index for transportation, storage and communication showed a further small decline. The drop reflected a less-than-seasonal increase in steam railways, an industry in which employment has tended to decline for several years.

Average Weekly Wages and Salaries

The industrial composite figure of average weekly wages and salaries for June was \$83.62, down slightly from the May figure. Industrially, there were gains in forestry, construction, public utility operation, trade and transportation, storage and communication, and declines in the remaining industrial divisions. Employment gained more in percentage terms in forestry, construction and service than in other industrial divisions. The greater weight of construction (where average weekly wages and salaries are normally above the industrial composite figure) tended to bring up the composite average, but the increase in service had an offsetting influence. The employment gain in forestry had little effect on the composite figure, as the wage and salary averages for forestry differed little from the composite figure in May and June.

Average weekly wages and salaries rose from May to June in all provinces except Prince Edward Island, Quebec and Ontario. The observance of St. Jean Baptiste Day as an unpaid holiday in some firms was a factor in the decline in Quebec.

NSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 - Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6.7.8 - State in Question 6, days and hows in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hows. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, howes or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION

OTTAWA

8003-3.2: 15-1-63

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Newfoundland 47 Prince Edward Island 24 Nova Scotia 51 New Brunswick 50 Quebec 62 Ontario 68 Manitoba 61 Saskatchewan 39 Alberta 51	Province	p.c.
Diffish Columbia	Prince Edward Island Nova Scotia New Brunswick Quebec Ontario Manitoba Saskatchewan	24 51 50 62 68 61 39

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

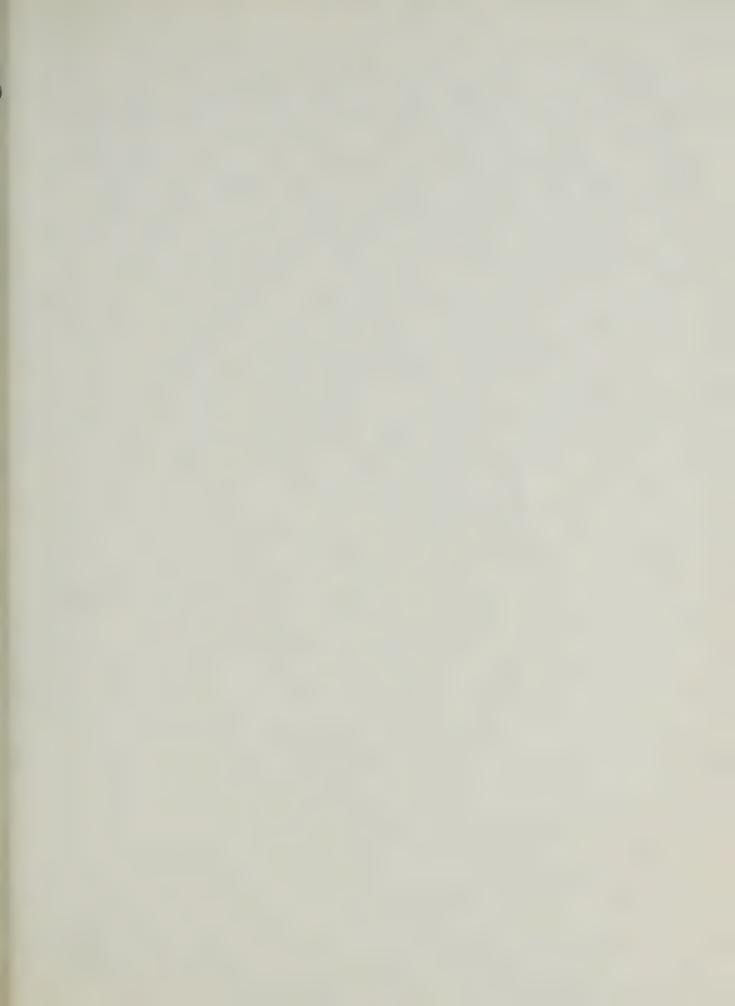

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

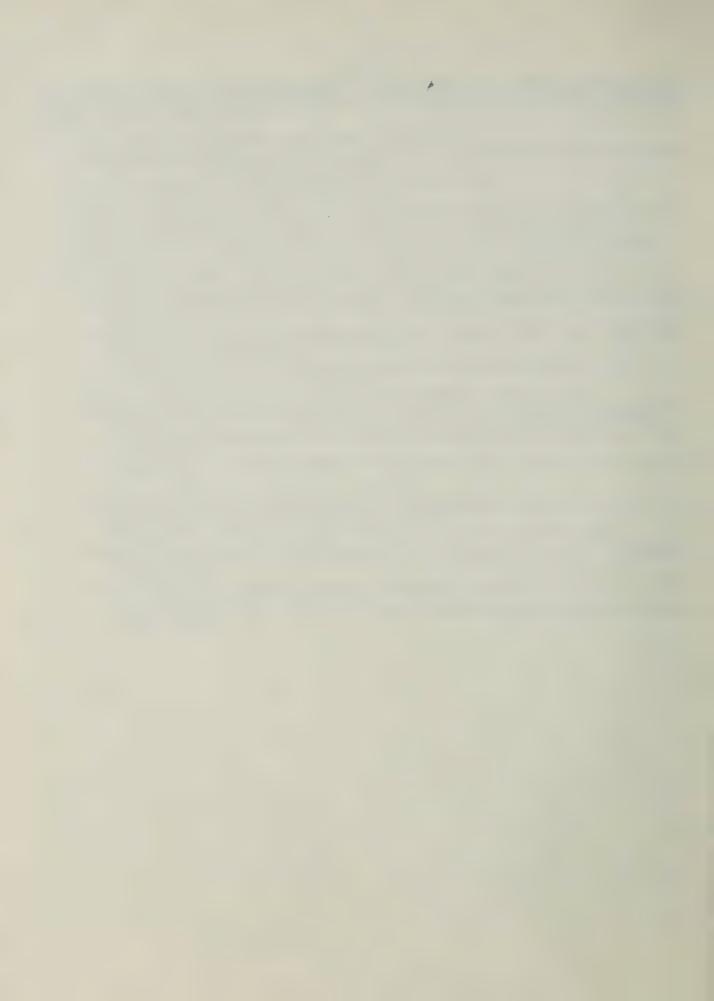

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202-Review of Man-Hours and Hourly Earnings-Annual-Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 — Earnings and Hours of Work in Manufacturing — Annual — Preliminary Report — Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)
- 72-502 Labour Income, 1926-58 Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

NOTE: The seasonally-adjusted employment index numbers shown in Table 2 have been revised. Revised figures for 1953 and 1959 have also been prepared, and will be published in the 1962 issue of the Review of Employment and Payrolls.

NOTE: Seasonally-adjusted index numbers of employment for the provinces are now published regularly, commencing with the April 1963 issue.

EMPLOYMENT, PAYROLIS AND AVERAGE WEEKLY EARNINGS, JULY, 1963

Summary

The industrial composite index of employment (1949=100) for July, at 127.5, was unchanged from June. There were increases in all major industrial divisions except manufacturing and trade. In manufacturing, employment declined sharply as firms in the motor vehicle and motor vehicle parts and accessories industries reduced staffs to carry out the annual model changeover.

Seasonally adjusted, the industrial composite index for July declined to 123.5. There were reductions in both components of manufacturing, construction and public utility operation. In durables, the adjusted index declined as a result of larger-than-usual layoffs in the motor vehicles industry for model changeover. In non-durables, employment rose considerably less than seasonally, due mainly to a major industrial dispute in fisheries in British Columbia. The continued decline in construction reflected weakening in most regions but industrial disputes in Ontario were also a contributing factor.

Increases occurred in the seasonally-adjusted employment indexes for six provinces. The increases were offset by declines in Newfoundland, Alberta, British Columbia and Ontario.

The industrial composite figure of average weekly wages and salaries was \$83.34 in July, down 30 cents from June. The latest figure was \$2.44 above that for July 1962. The payroll index at 249.5 was down slightly from June 1963 and up 4.3 p.c. from July 1962.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing declined from 116.0 in June to 115.3 in July. Both major components contributed to the decline; the seasonally-adjusted index for durables was down 0.5 p.c. to 119.6 while that for non-durables was down 0.7 p.c. to 111.6.

In durable goods manufacturing, employment changes from June to July did not differ substantially from usual seasonal fluctuations in all component industry groups, except transportation equipment. Employment advanced a little more than seasonally in wood products and non-ferrous metal products and declined less than seasonally in electrical apparatus and supplies. Decreases in iron and steel and non-metallic mineral products were seasonal. In iron and steel, most component industries recorded usual seasonal movements; however, there was a smaller-than-seasonal decline in machinery products and larger-than-seasonal decreases in fabricated and structural steel and iron castings.

The above-average decline in transportation equipment reflected layoffs associated with the model changeover. The heavy layoffs occurred because in 1963 all major car manufacturers shut-down their plants for retooling while in previous years this has not been the case. The only other industry indicating some weakening was aircraft and parts.

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

The decline in the adjusted index for non-durable goods manufacturing reflected, largely, a major industrial dispute in fisheries in British Columbia. For the most part movements from June to July in component industry groups conformed to usual seasonal patterns although there were reductions in rubber and textile products which were smaller than seasonal, and a contra-seasonal rise in clothing.

Non-Manufacturing Industrial Divisions

The adjusted index for forestry rose in July, due largely to a contraseasonal rise in that division in British Columbia. Mining was virtually unchanged over the month. The construction index again recorded a large reduction in July and as a result declined to its lowest level since 1955. The adjusted indexes for all the service producing industrial divisions except public utility operation advanced over the month. However, the increase in trade was slight.

Provincial and Regional Developments

The seasonally-adjusted industrial composites for Ontario, the Prairie Region, and British Columbia declined between June and July offsetting advances in the Atlantic Region and Quebec. In Ontario, a larger-than-usual seasonal layoff in the motor vehicle industry was an important factor in the decrease as were major industrial disputes in the construction industry. The small decline in the Prairie Region reflected weakening in construction and manufacturing. The index for British Columbia fell by 2.5 p.c. due mainly to a major industrial dispute in the fisheries industry; however, there was also slackening in construction, and in trade.

In the Atlantic Region, larger-than-seasonal increases in construction and transportation, storage and communication outweighed smaller-than-average increases in mining. In Quebec the employment situation improved in forestry, manufacturing and trade. The only weakening occurred in construction in which employment rose considerably less than is usual for the time of year.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries declined by 30 cents to \$83.64 in July. The decrease reflected, in part, declines in the per capita earnings of nearly all major industrial divisions. A major factor, however, was a reduction in the weight of the relatively high pay durables division where there were large decreases in employment due to the model changeover mentioned previously.

Only mining, construction and trade reported increased average weekly earnings in July. The rise in mining reflected wage increases in the metals group and a longer work week. Increased earnings in the relatively high pay mining and construction divisions combined with increases in employment that were greater than the average for all industries, partially offset losses elsewhere. Average earnings in trade were only slightly higher in July, however, reductions in staffs in this relatively low pay industry had an upward influence on aggregate per capita earnings.

9-ESIa - Monthly Employment Report		Official title	Required	Required under the Statistics Act of Canada	Date s Act of Canada Chap, 257, R.S.C. 1952

NO POSTAGE REQUIRED

INSTRUCTIONS

please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question I when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 – Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. It possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, I or J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance, separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, salaried employees and wage-earners), included in Question 2C.

Question 5 — Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6-7-8 - State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employment, hours or earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION OTTAWA

8003-3.2: 15-1-63

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland Prince Edward Island	47 24
Nova Scotia	51 50
Quebec	62 68
Manitoba	61
Saskatchewan Alberta	39 51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

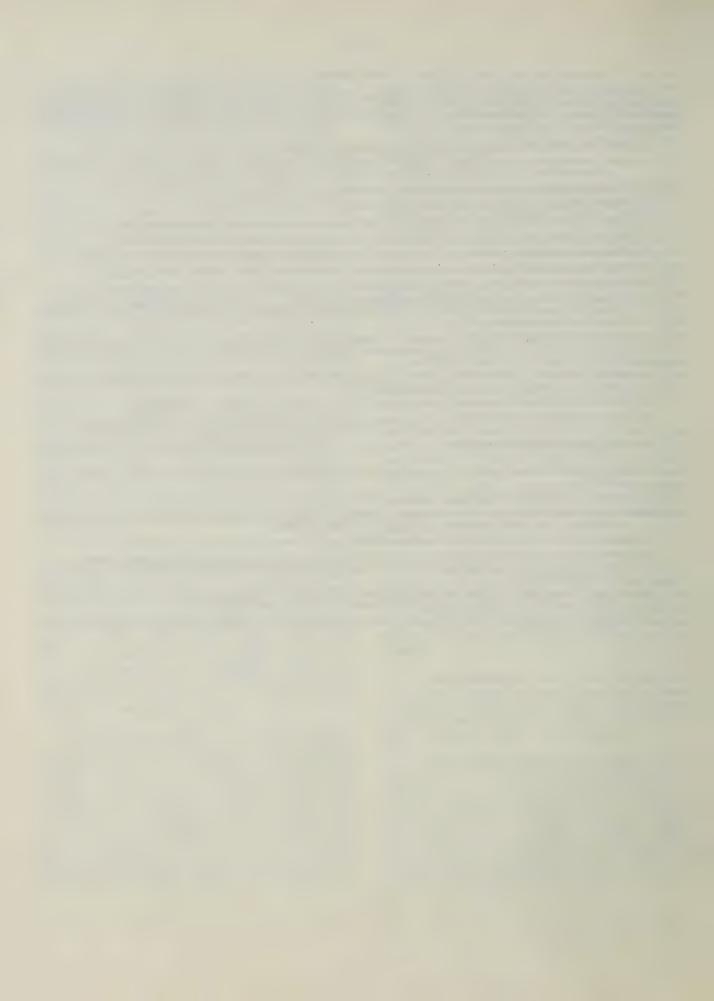

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

Volume 41, No. 8

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 — Hiring and Separation Rates in Certain Industries — Semi-Annual — Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201-Review of Employment and Payrolls-Annual-Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

The value of this monthly report depends largely upon the quality and regularity of the returns furnished by respondents. These number many thousands, widely distributed throughout the country. Co-operation generally is excellent, but some reports are held up and others contain significant errors or omissions, causing delays in compilation. In order to make reasonably reliable statistics available to users as soon as possible, preliminary figures are issued monthly before all returns and corrections have been received. Accordingly, the first statistics released for any month are subject to revision in the next report.

The Dominion Bureau of Statistics wishes to express its sincere appreciation of the co-operation and the interest shown over the years by the employers and their officers contributing to these widely-used series.

NOTE: The seasonally-adjusted employment index numbers shown in Table 2 have been revised. Revised figures for 1958 and 1959 have also been prepared, and will be published in the 1962 issue of the Review of Employment and Payrolls.

NOTE: Seasonally-adjusted index numbers of employment for the provinces are now published regularly, commencing with the April 1963 issue.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, AUGUST, 1963

Summary

The industrial composite index of employment (1949=100) for the end of August 1%3, at 129.9, was up 1.7 p.c. from July. The advance was larger than is usual from July to August and resulted mainly from above-average increases in forestry, manufacturing, construction and trade.

Seasonally adjusted, the industrial composite index rose to 124.3 in August, up 0.6 p.c. from the July figure of 123.5. Most major industrial divisions advanced. The largest percentage increases occurred in forestry and construction. In the former, an above-average rise in the Atlantic Region was the main factor in the increase. A marked advance in highway, bridge and street construction in Quebec accounted for much of the increase in the adjusted index for construction.

The seasonally-adjusted index for manufacturing rose to 115.7 in August, up 0.5 p.c. from the July figure of 115.1. A major part of this increase reflected strengthening in the durables component, where larger-than-seasonal gains occurred in transportation equipment.

The seasonally-adjusted industrial composites for four of the five regions advanced in August. The largest percentage gain occurred in British Columbia where employment rose in canned and cured fish plants following the settlement of a major industrial dispute in fisheries.

The industrial composite of average weekly wages and salaries for August was unchanged at \$83.27. The latest figure was \$2.47 above August 1962. The payroll index of 254.0 was 1.7 above July 1963 and 5.4 p.c. above August 1962.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing rose by 0.5 p.c. from 115.1 to 115.7 between July and August. The increase offset part of the decline between June and July when the index fell by 0.8 p.c. The index tended to weaken over the late spring and summer of 1%3. The durables component, seasonally adjusted was slightly lower in August than in April while the non-durables component, seasonally adjusted, fluctuated at about the April level of 112.2 during recent months.

The July-to-August rise in the seasonally-adjusted index for <u>durable goods</u> manufacturing followed a decline of equal size from June to July. The recovery in August reflected larger-than-average increases in transportation equipment and electrical apparatus and supplies. The gains in these industries outweighed slackening in non-ferrous metal and non-metallic mineral products. Small changes in employment in wood and iron and steel products between July and August were seasonal.

In transportation equipment, the July decline in employment which related to the model changeover in motor vehicles, was unusually large and as a result, the July

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

Industrial composite				3,400	1					

index of 63.0 was the lowest recorded for that industry in the post-war period. Since some major producers had not resumed full operation by the end of August employment in the industry continued substantially below pre-changeover levels. The employment decline due to the model changeover was smaller than usual in the motor vehicle parts and accessories industry and this offset to some extent the reductions in the motor vehicle industry. In the remaining component industries of transportation equipment, employment expanded in aircrafts and parts and railroad and rolling stock equipment but declined more than seasonally in shipbuilding and repairing.

The slackening noted in the adjusted index for durables after April did not reflect general weakening in the component industries. Wood products weakened steadily during the first half of 1963 but picked up somewhat in July and August. Iron and steel products advanced but at a reduced rate after April. In transportation equipment, most component industries expanded but this was offset by a contraction in shipbuilding and repairing. Non-ferrous metals strengthened through most of 1963. Employment in electrical apparatus and supplies expanded in the first five months of 1963 but showed no clear trend after April. Non-metallic mineral products weakened.

The small rise in the seasonally-adjusted index for non-durable goods manufacturing between July and August reflected an above-average rise in employment in food and beverages as a result of the settlement of a major industrial dispute in fisheries in British Columbia. The gains in food and beverages were partly offset by smaller-than-usual advances in clothing and paper products. In clothing, employment did not rise as much as is usual between July and August due to a major industrial dispute in the knit goods industry.

The seasonally-adjusted index for non-durable goods manufacturing expanded in the first 5 months of 1963. The flattening in the index since that time may be attributed to factors of a temporary nature relating to the food and beverage, tobacco, and clothing industries. In recent months, only the numerically small leather and rubber products industries weakened. On the other hand, large industry groups, such as textiles, clothing, paper products and printing, publishing and allied industries, expanded.

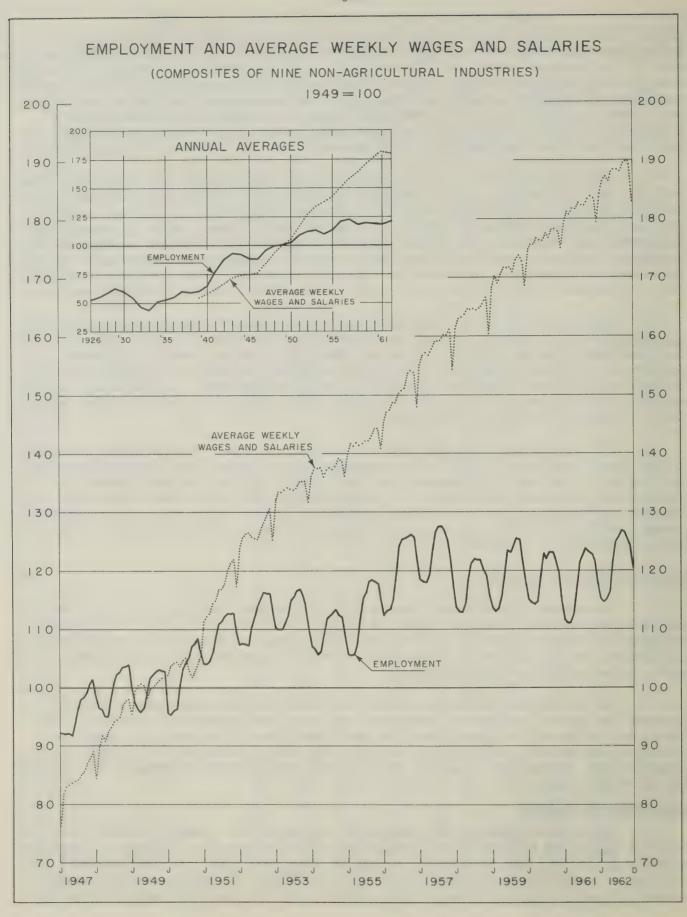

Non-Manufacturing Industries

The seasonally-adjusted indexes for the goods-producing industrial divisions all advanced in August. Over the period April to August, 1963, employment expanded in forestry, showed little change in mining, and declined in construction. The decline in the last-named industry was the only substantial downward movement among the major industrial divisions.

In the service producing industrial divisions, the seasonally-adjusted indexes for trade and finance, insurance and real estate advanced in August. The increases in these divisions outweighed small declines in the remaining service producing industries. Since April, continued expansion in trade, in finance, insurance and real estate and in service has been the main factor offsetting the contraction in construction.

Provinces and Regions

The seasonally-adjusted industrial composites for Quebec, Ontario, the Prairie Region and British Columbia rose from July to August. The largest increases occurred in Ontario and British Columbia. In both provinces, larger-than-usual increases in manufacturing and trade were major factors. In Quebec, the industrial composite showed a small rise, as above-average increases in trade and construction

were offset in part by a smaller-than-seasonal advance in manufacturing and a contraseasonal decline in mining. The only decrease was recorded in the industrial composite for the Atlantic Region where a contra-seasonal decline in manufacturing was the main factor in the reduction.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries for August, at \$83.27, was unchanged from July. Per capita earnings in August were up from July in manufacturing, construction, transportation, storage and communication; public utility operation, and service. The increases were generally small, ranging from 8 cents in service to 53 cents in public utility operation. More important upward influences on per capita earnings were large employment increases in the relatively highly paid manufacturing and construction industries. The gains described above were offset in part by reductions in per capita earnings in forestry, mining, trade and finance, insurance and real estate. An added factor was small declines in employment in the mining and transportation, storage and communication divisions, where per capita earnings are above average, and a consequent reduction in their contribution to the general average of earnings.

Six provinces showed higher per capita earnings in August. Average earnings were down in Nova Scotia, New Brunswick, Ontario and British Columbia.

INSTRUCTIONS

Please complete form if you had any employees in last pay period in indicated month. If the business was inactive, state in Question 1 when you expect to resume, with explanation in Question 8. Prompt attention to this form will be appreciated.

Employees - Include all workers drawing pay except (a) casual employees working less than one day in pay period, (b) owners, firm members, pensioners, homeworkers and (c) employees absent without pay throughout the pay period.

Salaried Employees are defined as office workers, supervisors above level of working foremen, managerial staffs, travelling salesmen, etc.

Wage-earners are production and related workers, working foremen doing same work as those they oversee, routemen, delivery, maintenance staffs, etc.

Gross Salaries and Wages for last pay periods in month include overtime, shift differentials, commissions, bonuses and special payments, before deductions for income tax, unemployment insurance contributions, etc.

Question 2 - Report separately for wage-earners and salaried employees, including workers on commission, but exclude agents acting also for other firms. Enter gross earnings in employees' last pay periods in month, with totals in C.

Question 3 - Enter payroll details for employees reported in 2C, grouped according to their pay periods. State dates of periods. Report in line A monthly payroll for persons paid once a month. For those paid twice a month, fortnightly or weekly, report in B, C or D numbers and payrolls only for last pay period. Report in E for those paid for other periods (4-week, 10-day, etc.), specifying also duration of pay period. If possible, report casual workers and their earnings in last week in month only, in F or G. Show separately in H, for J, with dates, commissions, bonuses and other special payments for periods differing from regular pay period of recipient, including retroactive, advance separation pay, etc. State type of payment. Totals in Questions 2 and 3 should agree.

Question 4 - Enter numbers of women, (salaried employees and wage-earners), included in Question 2C.

Question 5 — Enter data for last pay period in month for wage-earners of whose hours you keep record; exclude salaried employees and wage-earners paid fixed monthly amounts. Show number of wage-earners and the hours they worked or were paid for if absent with pay. Exclude bonus or premium overtime hours. Enter in E their gross wages, including overtime pay, for hours reported in D. If you use two pay periods for wage-earners, enter data separately for each period.

Question 6-7-8 — State in Question 6, days and hours in standard work week of establishment, e.g., 5 days, 40 hours; 7 days, 168 hours. If public holidays were observed in pay periods reported, state in Question 7 numbers of employees absent with pay and without pay. Reduce correspondence by entering in Question 8 comments regarding changes or conditions which affect employement, hours of earnings.

If further directions are required, please write the Employment Section.

Dominion Bureau of Statistics

EMPLOYMENT SECTION

OTTAWA

8003-3.3: 15-1-63

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants. recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate emplovees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	.c.
Prince Edward Island Nova Scotia New Brunswick Quebec Ontario Manitoba Saskatchewan Alberta	47 24 51 50 62 68 61 39 51

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72 - 202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)

72-502 - Labour Income, 1926-58 - Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, SEPTEMBER, 1963

Summary

The industrial composite index of employment (1949=100) was 130.1 at the end of September 1963, virtually unchanged from the August figure of 130.2. Increases in forestry, manufacturing and trade were balanced by declines in the remaining industrial divisions.

Seasonally adjusted, the industrial composite rose from 124.5 in August to 125.2 in September. The increase reflected strengthening in durable goods manufacturing, construction, trade and transportation, storage and communication. In manufacturing, the rise in the adjusted durables component resulted, mainly from a larger-than-seasonal rise in transportation equipment. In that industry, nearly all components recorded above-average increases but the main factor was a marked advance in the motor vehicle industry.

There were increases in the seasonally-adjusted indexes for all provinces and regions in September except those for Newfoundland and Prince Edward Island. The only significant advance, however, occurred in Ontario due to the rise in motor vehicles referred to above.

The industrial composite average of weekly wages and salaries for September, at \$84.02, was up 74 cents from August. The September figure was \$2.62 above the same month last year. The payroll index for September 1963, at 256.6, was 0.8 p.c. above August 1963 and 6.2 p.c. higher than September 1962.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing for September was 116.6, up 0.7 p.c. from August. The increase reflected a large advance in the durables component; the adjusted index for non-durables was virtually unchanged.

The increase in the adjusted index for <u>durables</u> resulted from an above-average rise in transportation equipment and smaller-than-seasonal declines in wood and iron and steel products. There were seasonal declines in non-ferrous metals and non-metallic mineral products. Electrical apparatus and supplies rose less than seasonally.

Wood products strengthened as a result of a smaller-than-seasonal decline in saw and planing mills. In iron and steel products, employment levels were virtually unchanged from August to September largely because the layoffs in the agricultural implements industry were much smaller than usual. In transportation equipment, all component industries except motor vehicle parts and accessories recorded larger-than-seasonal increases. The most significant advance however, was recorded in the motor vehicles industry as firms completed model change-over and resumed operations at employment levels exceeding those existing before the changeover.

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

The adjusted index for non-durable goods manufacturing declined slightly from August to September. In general, the employment changes in the component industry groups conformed to usual seasonal patterns. An exception was rubber products which showed a contra-seasonal decrease resulting from a major industrial dispute.

Non-Manufacturing Industries

Among industrial divisions other than manufacturing, the only significant increase, after adjustment for seasonality, occurred in construction, trade and transportation, storage and communication. In construction, a smaller-than-seasonal decline in the building and general engineering component was the main factor in the advance. In transportation, storage and communication, contra-seasonal increases in water transportation and in storage contributed to the rise in the adjusted index. In trade, the adjusted index rose as above-average increases were recorded in the retail component for the second successive month.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries rose by 74 cents to \$84.02 between August and September. All major industrial divisions reported higher per-capita earnings except transportation, storage and communication which declined. The main factor contributing to the rise in the composite was an increase of \$1.22 in manufacturing. In that division, the increase reflected an advance of \$4.01 in the highly paid transportation equipment group accompanied by a relatively large rise in employment in that industry.

Employment Review, October 1959 - August 1963

In August 1963, the seasonally-adjusted industrial composite index of employment was 124.5. This figure was 3.2 p.c. above the cyclical high (as shown in chart) of 120.6 recorded October 1959. Two-thirds of this increase resulted from expansion in the service-producing industrial divisions. Over the four year period, employment was up 7.2 p.c. in trade, 16.8 p.c. in finance, insurance and real estate and 19.3 p.c. in service. Manufacturing with a rise of 3.3 p.c. accounted for a little more than a quarter of the advance. Employment was down in mining, construction and transportation, storage and communication.

The years between the cyclical peak (referred to above) of October 1959 and August 1963 were characterized by a cyclical contraction in employment between October 1959 and March 1961 and expansion thereafter. The 1959-1961 decline in the seasonally-adjusted industrial composite was over 3.0 p.c. and reflected decreases in the cyclically sensitive goods-producing industrial divisions. In the service-producing industrial divisions, only the adjusted index for transportation, storage and communication showed a significant decline. There was little change in the adjusted indexes for trade and public utility operation, while those for finance, insurance and real estate and service expanded.

During the recovery after March 1961, manufacturing was the only goods-producing industrial division which made up the losses incurred during the decline. There was also some advance in forestry but the August 1963 seasonally-adjusted indexes for mining and construction were only slightly changed from those for March 1961.

In manufacturing, the greater part of the expansion occurred in durables. The adjusted index for durable goods manufacturing for August 1963 at 120.2 was up 10.9 p.c. from the Mardh 1961 figure of 108.5. All Components of durable goods manufacturing except non-ferrous metals, rose strongly. In non-durables, rubber products,

textile products and miscellaneous manufacturing industries recorded large gains. Food and beverages, clothing, paper and chemical products also advanced but not as markedly.

Between March 1961 and August 1963 all service-producing industrial divisions expanded except transportation, storage and communication. Employment in the latter industry has been virtually unchanged since 1961.

Regional Employment Review, October 1959 - August 1963

Employment levels for August 1963 were up from October 1959 in every region except the Prairie Region where it was virtually unchanged. Quebec was the only region showing an increase greater than for Canada as a whole. The rise in Ontario approximated that for Canada.

During the period of downswing in the Canada composite between October 1959 and March 1961, the adjusted regional indexes also declined. The reductions were greatest in British Columbia and Ontario and least in Quebec. On the other hand, in the expansion which followed, British Columbia and Ontario with percentage gains of around 8.0 p.c. made the strongest recovery. However, as employment fell only moderately in Quebec during the downswing and advanced about 6.0 p.c. in that province during the recovery, Quebec showed the largest increase from the October 1959 level.

Regional Employment Trends, March 1963 - August 1961

In general, between March 1961 and August 1963, the overall trends in each of the major regions except the Atlantic Region, were similar to that for Canada as a whole. In most regions, expansion began early in 1961 and continued through 1962 and the first half of 1963. In the Atlantic Region, employment advanced in 1961 but declined in 1962. However, over the period from March 1961 to August 1963 employment was up by 4.6 p.c.

In general, industrial divisions showing marked expansion at the Canada level also advanced strongly in each major region. Thus, in almost all regions employment levels for 1963 were substantially higher than for 1961 in manufacturing; trade; finance, insurance and real estate; and service. A notable exception was the Prairie Region. The combined statistics for the Prairie Provinces showed virtually no gain in trade over the period and only a moderate advance in manufacturing.

In the Atlantic Region, there was marked expansion between March 1961 and August 1963 in manufacturing; finance, insurance and real estate; and in service but a general weakening in transportation, storage and communication. The decline in the seasonally-adjusted industrial composite for 1962, reflected a contraction in forestry and construction in addition to that for transportation, storage and communication.

In Quebec, the seasonally adjusted industrial composite index of employment rose strongly in 1961, levelled in 1962 and expanded in the first three quarters of 1963. However, the rate of advance in 1963 was below that for 1961. Expansion was mainly in the service industries and manufacturing where employment levels for the third quarter of 1963 were substantially above those for the same quarter in 1961. However, some weakening was indicated in the past twelve months. During this time, employment levels have fallen in leather, transportation equipment and electrical apparatus and supplies.

In Ontario, a substantial increase in manufacturing was the major feature of the expansion. In that division, the greater part of the advance occurred primarily within the durables component where increases in iron and steel, transportation equipment and electrical apparatus and supplies were particularly great. In non-

Industrial composite	124.3	123.2	129.3	- 0.9	5.0	4.0

durables, advances in rubber, textiles, clothing and paper products were significant. Among the remaining industrial divisions, employment levels were up from 1%1 in all but mining. In mining, lower employment levels reflected reduced employment in gold and uranium.

The seasonally-adjusted industrial composite for the <u>Prairie Region</u>, at 132.4 for August 1963, was 3.6 p.c. above the figure for March 1961 of 127.8. In this region, manufacturing rose less rapidly than in others. Employment strengthened in the clothing, wood, and iron and steel industries, was sluggish in transportation equipment and weakened in food and beverages, and products of petroleum and coal. The great strength in the region was in the service industries, particularly public utility operation; finance, insurance and real estate; and service, and in construction. However, the last named industrial division indicated some weakening in the second and third quarters of 1963.

The industrial composite index of employment for British Columbia was up 7.7 p.c. from 111.6 in March 1961 to 120.2 in August 1963. All major industrial divisions shared in this expansion except public utility operation. As in other regions employment in manufacturing; trade; finance, insurance and real estate and service made substantial gains. In addition, British Columbia showed continuous gains in mining due largely to expansion in metals.

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	24 51
New Brunswick	50 62
Ontario	68
Manitoba Saskatchewan	61 39
Alberta	51 61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)
- 72-502 Labour Income, 1926-58 Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

NOTICE

Statistics of employment and per capita earnings for the forestry industry in Quebec have been revised. A description of the changes and comparative tables appear on pages 9, 10 and 11.

EMPLOYMENT, PAYROLIS AND AVERAGE WEEKLY EARNINGS, OCTOBER, 1963

Summary

The industrial composite index of employment (1949=100) was 129.3 at the end of October 1963, down 0.8 p.c. from the September figure of 130.3. Employment in most major industrial divisions declined; the exceptions were forestry, trade and finance, insurance and real estate which usually rise between these months.

Seasonally adjusted, the industrial composite index of employment for October was virtually unchanged at 125.6. Among the major industrial divisions the only significant increase occurred in manufacturing. However, this gain was offset to some extent by a decline in forestry. The adjusted indexes for the remaining divisions showed small variations over the month.

The adjusted index for manufacturing rose by 0.6 p.c. to 117.4 from September to October, with increases in both major components. In durables, there was strengthening in wood products, iron and steel products and transportation equipment. In non-durables, a marked advance in the rubber products industry following settlement of a major industrial dispute was a contributing factor.

The industrial composite of average weekly wages and salaries was \$84.67 at the end of October 1963, up 45 cents from September. The latest figure was \$3.04 above October 1962. The payroll index for October, at 256.8, was down 0.3 p.c. from September 1963 but up 7.0 p.c. from the October 1962 figure of 240.1.

Employment

Manufacturing

The seasonally-adjusted index of employment for manufacturing rose by 0.6 p.c. from September to 117.4 at the end of October. The increase resulted from a strengthening in both major components. The adjusted index for durables rose by 0.7 p.c. to 123.2, while that for non-durables rose by 0.5 p.c. to 112.6.

Employment in manufacturing has shown great strength in recent months after sluggish movement from April to July 1963. A major factor in the revival has been an upswing in durables which declined from April to July. The latest seasonally-adjusted index for that component was 2.1 p.c. above the April figure of 120.7. The seasonally-adjusted index for non-durable goods manufacturing has levelled in recent months.

The strength in the adjusted index for <u>durable goods manufacturing</u> reflected an above-average increase in transportation equipment and smaller-thanseasonal reductions in wood and iron and steel products. The improvement in transportation equipment resulted from larger-than-usual increases in aircraft and parts, motor vehicle parts and accessories and railroad and rolling stock equipment. In wood products, the usual decline in employment from September to October was

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

relatively mild in 1963. In iron and steel products, employment declined less than seasonally in fabricated and structural steel, iron castings, primary iron and steel and sheet metal products.

The seasonally-adjusted index for non-durable goods manufacturing rose by 0.5 p.c. to 112.6 from September to October. The advance reflected an above-average increase in the rubber products industry following settlement of a major industrial dispute. The changes in the remaining component industries did not differ significantly from usual seasonal behaviour.

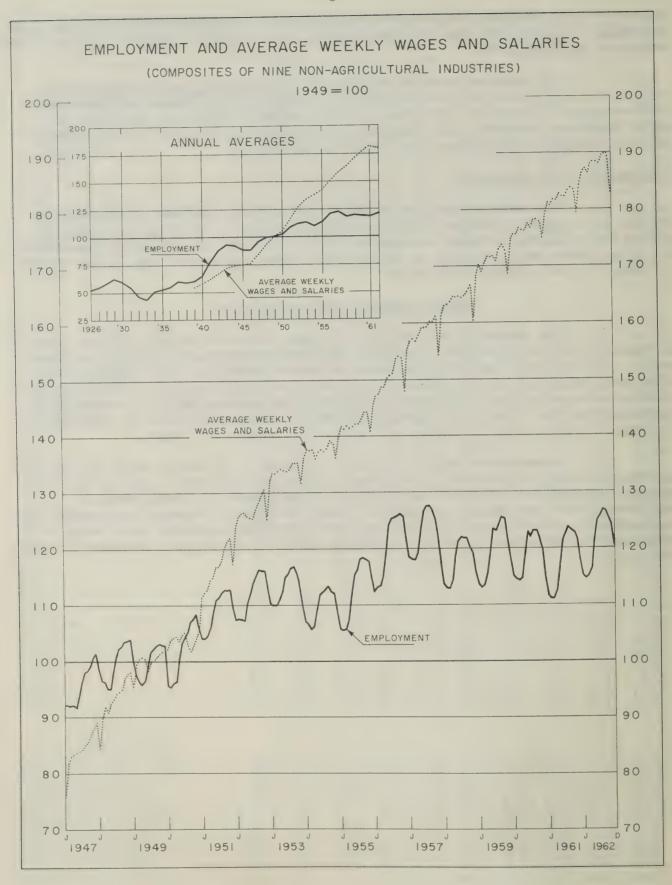

Non-Manufacturing Industries

The seasonally-adjusted index for forestry declined in October, largely as a result of weakening in the Atlantic Region. There was no change in mining and a slight decrease in construction. In the service-producing industrial divisions there was an advance in the adjusted index for service but little change in those for the remaining divisions.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries rose by 45 cents to \$84.67 in October, a slightly higher-than-average variation for these months. For the most part, this advance reflected increases of 74 cents in manufacturing and \$1.02 in transportation, storage and communication. Offsetting influences were a decline of 36 cents in construction accompanied by a reduction in employment in that relatively highly paid industry, and an increase in employment in trade where per capita earnings are below the average for Canada.

In manufacturing, there were increases of 49 and 85 cents in durables and non-durables, respectively. The rise in durables reflected a gain of \$1.95 in average earnings and a substantial increase in employment in transportation equipment, where per capita earnings are above the general average in durables. In non-durables, an advance of \$2.44 in food and beverages associated with large reductions in employment contributed substantially to the overall increase for that division.

A Note on the Change in Reporting Procedure for Quebec Forestry

Commencing with the present report, statistics of employment and per capita earnings for the forestry industry in Quebec are revised to improve quality of data for pieceworkers and certain other categories of bushworkers. These revisions have also been applied to data for each month back to and including January 1961. In the following tables, monthly and annual employment indexes and average broader groups are shown as previously published and on the new basis, for the industry and for the Revisions to the seasonally-adjusted employment indexes have been carried back to 1958. In future months, data will be available only on the new basis.

The revisions are designed to produce employment, payroll and weekly earnings series that are more closely comparable in content with those for other industries and areas. In general, they minimize the effect of high labour turnover rates in forestry in Quebec, increase the average weekly earnings and reduce the amplitude of their month-to-month fluctuations. The improvements were made possible through the co-operation of logging operators in the province who changed their reporting procedures for pieceworkers and, in many cases, for daily and hourly-rated workers in logging camps.

Under the former procedure, the number of employees on payroll at any time in the report month was usually reported, regardless of when or how long they worked. Monthly payrolls frequently included advances on earnings and settlements for work done in earlier periods and excluded earnings for unscaled wood (i.e. wood cut but not measured). Average weekly earnings were found by dividing the reported employment by the weekly equivalent of the payroll, as described in the notes at the back of this bulletin.

In the new procedure, aggregate man-days worked in the report month by pieceworkers and, in some cases, by other bushworkers are reported, together with the gross remuneration for this time, excluding payments for work done in previous months and including estimated earnings for unscaled wood. The average number of such workers on strength in the last week of the month is also reported. This average is used in tabulation; the corresponding payroll and per capita weekly earnings are found by relating the average daily earnings calculated from the monthly figures to the weekly average employment. There is no change from the former procedure for salaried employees or for wage-earners reported on a basis comparable with other industries.

The difference in employment levels resulting from minimizing labour turnover among bushworkers was substantial, although it was limited by the inclusion of a number of workers who had not been reported on the original returns. For example, in August 1963, the revised employment figure of 24,789 was 988 below that reported on the old basis. The new employment indexes have been linked through the 1961 and 1962 annual averages to those previously published. Month-to-month relationships in the revised indexes differed substantially in many instances from those in the original series. The revisions significantly affected the Canada figures for the industry but, because of the comparatively small weight of forestry in the aggregates of all industries covered, the industrial composite indexes for Quebec and for Canada were influenced to a much lesser extent.

The annual averages of weekly earnings for forestry in 1961 and 1962 were increased by more than \$5.00 in Quebec and by more than \$2.00 in Canada, while the respective industrial composite earnings varied by only a few cents. Month-to-month fluctuations in earnings levels were less extreme than in the original series. This is particularly notable in the spring months when seasonal layoffs and settlements formerly caused substantial variations in earnings levels.

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business: statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	47
Prince Edward Island	24
Nova Scotia	51
New Brunswick	50
Quebec	62
Ontario	68
Manitoba	61
Saskatchewan	39
Alberta	51
British Columbia	61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month. fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays. sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

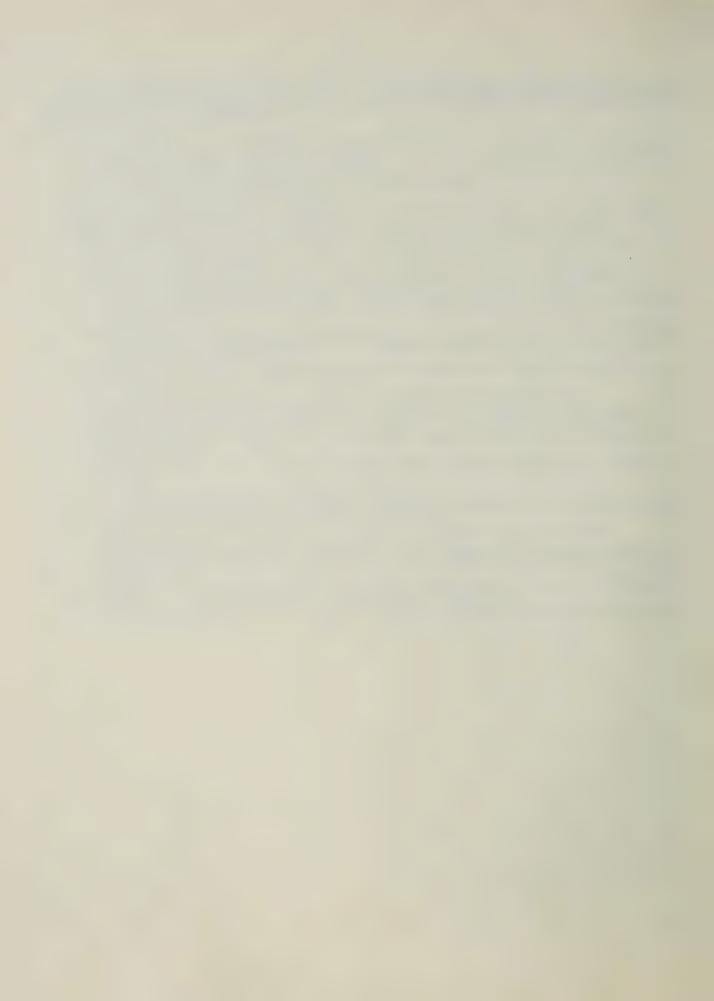

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (0) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003-Man-Hours and Hourly Earnings-Monthly-Price \$3.00 per year

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)

72-006-Hiring and Separation Rates in Certain Industries-Semi-Annual-Price \$1.50 per year

(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201-Review of Employment and Payrolls-Annual-Price \$1.00

(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202-Review of Man-Hours and Hourly Earnings-Annual-Price 75 cents

(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203 - Earnings and Hours of Work in Manufacturing - Annual - Preliminary Report - Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)
- 72-502 Labour Income, 1926-58 Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, NOVEMBER, 1963

Summary

The industrial composite index of employment (1949=100) declined less than seasonally from October to November. The November index, at 128.7, was down 0.5 p.c. from the October figure of 129.4. There were decreases in every major industrial division except trade which rose, and finance, insurance and real estate which was virtually unchanged. Trade usually shows a large increase just prior to Christmas; however, the rise in 1963 was above average.

Seasonally adjusted, the industrial composite rose from 125.7 in October to 126.4 in November. This advance reflected strengthening in durable goods manufacturing, construction and trade. The advance in the adjusted index for durables resulted, mainly, from an above-average increase in transportation equipment and a smaller-than-seasonal decrease in wood products. The rise in the adjusted index for construction was due to smaller-than-usual declines in general engineering and highway, bridge and street construction.

The seasonally-adjusted industrial composite indexes for nearly all provinces rose from October to November. Marked improvement occurred in the Prairie Region where the adjusted index for each province rose by 1.5 p.c. or more. There was virtually no change in the Atlantic Region as advances in the adjusted indexes for Newfoundland and New Brunswick were offset by reductions in those for Prince Edward Island and Nova Scotia.

The industrial composite of average weekly wages and salaries for November was \$84.63, virtually unchanged from October. However, the latest per capita figure was \$3.08 above November 1962. The payroll index for November, at 255.6, was down 0.6 p.c. from October, but up 7.4 p.c. from the November 1962 figure of 237.9.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing advanced from 117.5 in October to 118.0 in November, an increase of 0.4 p.c. The gain resulted from an increase in the durables component where the adjusted index rose by 1.0 p.c. to 124.5. The seasonally-adjusted index for non-durable goods manufacturing at the end November was unchanged at 112.6.

The latest advance in manufacturing continued the expansion that followed the second quarter decline. From April to July the adjusted index slipped from 116.1 to 115.1. After July, however, the index more than made up this loss so that the November index of 118.0 was 1.6 p.c. above April 1963 and approximated the postwar cyclical high of 117.9 recorded for January 1957.

The characteristics of the seasonally-adjusted manufacturing index after April have been determined almost entirely by the durables component. From

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

April to July, durables declined by 1.3 p.c. to 119.1; from July to November the index rose by 4.5 p.c. to 124.5. Employment in non-durable goods manufacturing has shown little movement since April, fluctuating at about 112.2 over that period.

The large increase from October to November in the seasonallyadjusted index for <u>durable goods manufacturing</u> resulted from strengthening in wood
products, transportation equipment and electrical apparatus and supplies. In wood
products, there was a contra-seasonal rise in furniture and a smaller-than-seasonal
reduction in saw and planing mills. A marked advance in transportation equipment
resulted from larger-than-usual increases in aircraft and parts and motor vehicle
parts and accessories. Reductions in iron and steel, non-ferrous metal and nonmetallic mineral products did not differ significantly from usual seasonal patterns.
In iron and steel products, there was mild strengthening in most component industries
but this was offset by contra-seasonal reductions in agricultural implements and iron
castings.

The seasonally-adjusted index of employment for <u>non-durable goods</u> <u>manufacturing</u> was unchanged in November at 112.6. Among the component industries, moderate expansion continued in textile, clothing and paper products while employment in rubber products approached levels existing prior to the recent industrial dispute in that industry. An early start in tobacco processing resulted in a larger-than-usual rise in the tobacco products industry. These mildly stimulating influences were offset by a larger-than-seasonal reduction in food and beverages and a contraseasonal decline in leather products.

Non-Manufacturing Industries

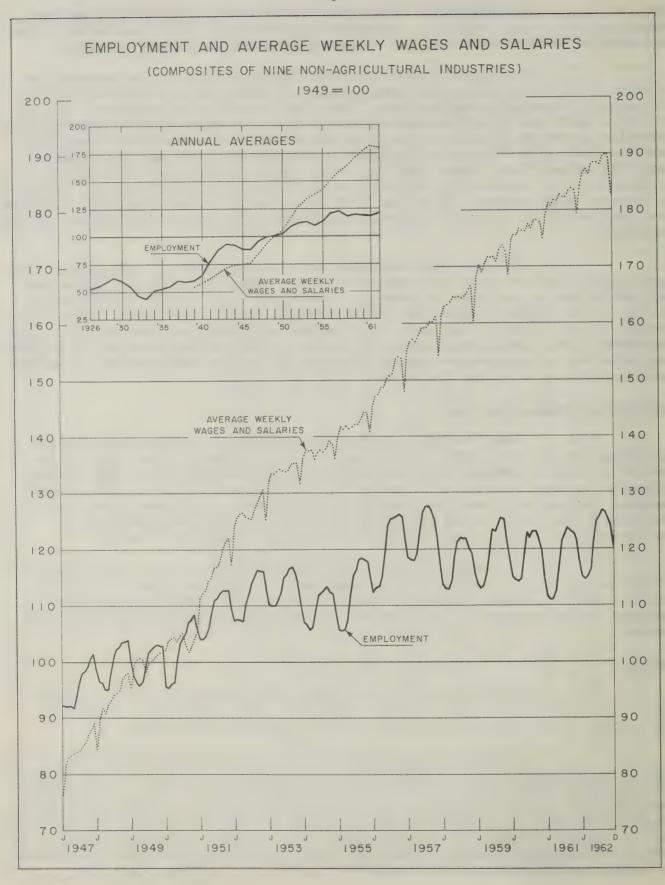

Among the goods-producing industrial divisions only mining did not strengthen over the month. The revised index for forestry rose from 67.7 in October to 69.4 in November after correction for seasonal variation. The adjusted index for construction rose by 1.1 p.c. to 125.5 in November due to smaller—thanseasonal declines in general engineering and in highway, bridge and street construction. There was a small decline in mining as a smaller—than—seasonal reduction in non-metals was balanced by an above—average reduction in metals.

In the service-producing industrial divisions the only significant advance occurred in trade where there was a substantial rise in the retail sector. However, a small increase in transportation, storage and communication extended the mild expansion which has been taking place in that division in recent months.

Regions

The seasonally-adjusted industrial composites for all regions except the Atlantic rose from October to November. The largest rise occurred in the Prairie Region where all provinces recorded substantial increases.

Generally, the trends in the major industrial divisions for the regions approximated those for Canada. Manufacturing and construction employment fell less than seasonally in every region except the Atlantic Region, while trade showed above-average increases in every region except Quebec. Forestry indicated slight improvement in the Atlantic Region, Quebec and Ontario but slackened somewhat in British Columbia. In mining, strengthening in non-metals in Quebec was offset by weakening in metals in Ontario. All regions showed seasonal reductions in transportation, storage and communication except the Prairies, where the

reductions were much smaller than usual. In all regions, the variations in public utility operation, service and in finance, insurance and real estate did not differ significantly from usual seasonal patterns.

Average Weekly Wages and Salaries

The industrial composite of average weekly wages and salaries for November, at \$84.63, was virtually unchanged from October, as the major industrial divisions showed offsetting movements. The main upward influence on per capita earnings was a rise of 86 cents in manufacturing. Offsetting factors included a \$2.58 reduction in construction accompanied by a decrease in employment in that relatively highly-paid industry, and a large increase in employment in trade where average earnings are lower than the general average.

In manufacturing, the rise of 86 cents from October to November was due to a gain of \$1.42 in the durables component. The increase in durables resulted from an advance of \$5.85 in transportation equipment combined with a substantial increase in employment in that relatively highly-paid industry.

Regionally, per capita earnings rose in the Atlantic Region, Ontario and British Columbia and declined in Quebec and the Prairie Region. In the Atlantic Region, increases of \$1.23 and \$1.10 in Prince Edward Island and New Brunswick respectively were offset to some extent by a reduction of \$1.23 in Newfoundland.

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade. finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business: statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Newfoundland 47 Prince Edward Island 24 Nova Scotia 51 New Brunswick 50 Quebec 62	Province	p.c.
Manitoba 61 Saskatchewan 39 Alberta 51 British Columbia 61	Prince Edward Island Nova Scotia New Brunswick Quebec Ontario Manitoba Saskatchewan Alberta	24 51 50 62 68 61 39 51

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month. fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

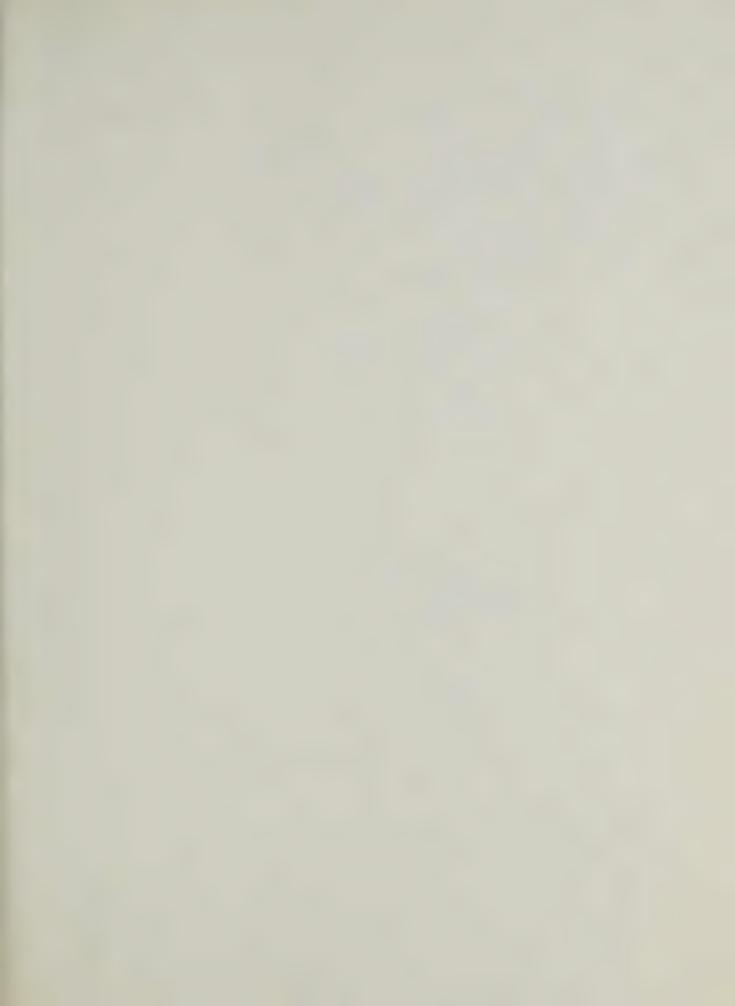

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
- (1) Other chemical products includes explosives, ammunition and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Building includes buildings and structures; special trade contractors. General engineering includes other construction, other than highways, bridges and streets.
- (n) Water transportation includes water transportation; services incidental to water transportation.
- (o) Electric and motor transportation includes bus and coach transportation-interurban; urban and suburban transportation systems; taxicab; truck transportation; services incidental to transportation; other transportation.
- (p) Urban and interurban transportation includes bus and coach transportation-interurban; urban and suburban transportation systems.
- (q) Other public utilities includes gas manufacture and distribution; water and sanitary services; other public utilities.
- (r) Industrial Machinery includes machine tools; machinery, n.e.c.
- (s) The Northwest Territories with the exception of Baffin Island are included in Alberta. Baffin Island is included in Quebec. The Yukon Territories is included in British Columbia.
- (t) Synthetic textiles and silk includes synthetic filament yarn and staple fibre; spun yarn and fabric.
- (u) Durable goods manufacturing includes wood, iron and steel, transportation equipment, non-ferrous metal, electrical apparatus and supplies and non-metallic minerals. The non-durable group includes the remaining manufacturing industries.
- (v) Service includes hotels, restaurants, laundries, dry cleaning plants, business, recreational services and miscellaneous services. Government, community and health services are not covered.
- (w) Estimates of coverage are based on comparisons of data for 1951 with Population Census Statistics. For details, see notes on page i.

EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon establishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly - Price \$1.00 per year

(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$3.00 per year (industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier and certain historical comparisons:

(industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material)

- 72-005 Estimates of Labour Income Monthly Price \$2.00 per year (monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1951)
- 72-006 Hiring and Separation Rates in Certain Industries Semi-Annual Price \$1.50 per year

 (data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)
- 72-201—Review of Employment and Payrolls—Annual—Price \$1.00
 (industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)
- 72-202 Review of Man-Hours and Hourly Earnings Annual Price 75 cents

 (industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)
- 72-203 Earnings and Hours of Work in Manufacturing Annual Preliminary Report Price 25 cents

(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:

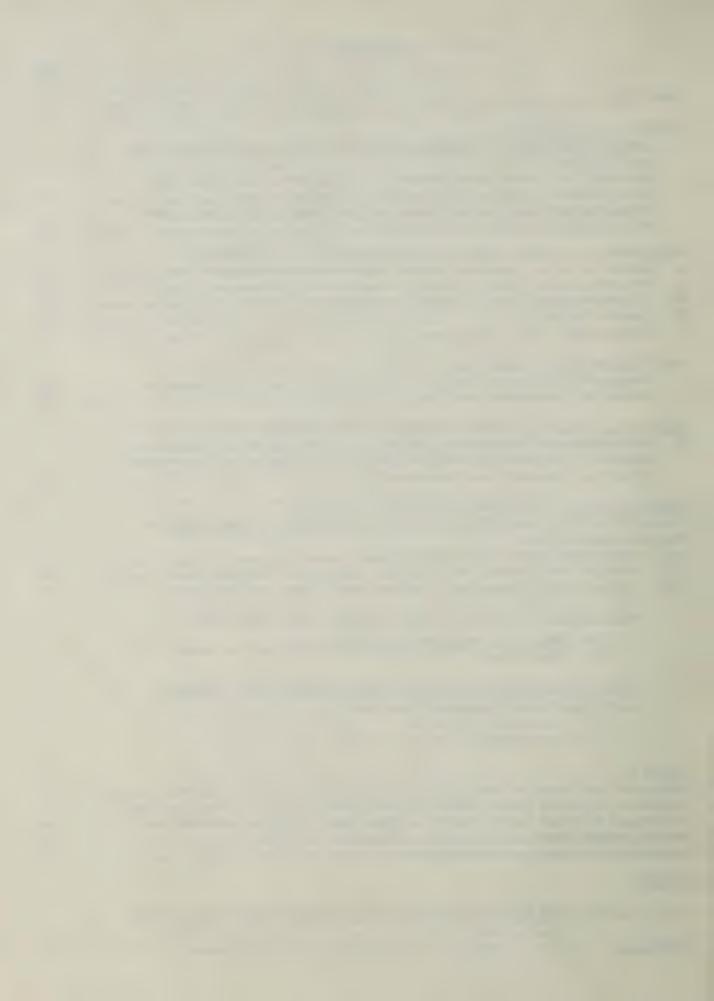

- (1) a segregation of office and clerical workers from the salaried group
- (2) a distribution of wage-earners and salaried employees in a given range of weekly earnings
- (3) a distribution of wage-earners in a given range of hours worked in the survey week)
- 72-502 Labour Income, 1926-58 Price 75 cents

(a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics or to the Queen's Printer, Ottawa.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS, DECEMBER, 1963

Summary

The industrial composite index of employment (1949=100) declined less than seasonally from November to December. The latest index was 125.4, down 2.5 p.c. from November. Seasonally-adjusted, the industrial composite rose by 1.0 p.c. to 127.6 in December. This marked advance reflected increases in manufacturing (1.4 p.c.), construction (2.6 p.c.) and transportation, storage and communication (1.3) p.c.

In manufacturing, the seasonally-adjusted indexes for both major components, durables and non-durables, rose strongly. A major part of the increase in durables occurred in the wood, iron and steel and transportation equipment industries. In non-durables, strengthening in clothing, and paper products were important factors.

The seasonally-adjusted indexes of employment for all regions were up in December. The largest increases were in the Atlantic Region (1.9 p.c.) and British Columbia (2.0 p.c.). In the remaining regions, employment rose by 1.0 p.c. in Quebec, 0.8 p.c. in the Prairie Region, and 0.4 p.c. in Ontario.

The industrial composite of average weekly wages and salaries declined by \$2.84 to \$81.77 in December. The December figure was \$3.26 above the same month last year. The payroll index, at 240.6, was down 5.8 p.c. from November 1963 but up 8.7 p.c. from the December 1962 figure of 221.4.

Employment

Manufacturing

The seasonally-adjusted index for manufacturing rose by 1.4 p.c. in December to 119.7. The advance resulted from substantial increases in both durable and non-durable goods manufacturing. The adjusted durables index rose by 1.3 p.c. to 126.0 and non-durables by 1.6 p.c. to 114.5.

The latest seasonally-adjusted increase in manufacturing employment continued an expansion which commenced in mid-summer. From April to July the adjusted index declined from 116.1 to 115.1, followed by a steady rise to present levels. The December index was 3.1 p.c. above April 1963 and 1.5 p.c. above the post-war cyclical high of 117.9 in January 1957.

All components of <u>durable goods manufacturing</u> strengthened over the month; however, the main sources of expansion were wood, iron and steel and transportation equipment. In wood products, most of the improvement occurred in the saw and planing mills component, which have shown great strength in recent months. In iron and steel there were contra-seasonal increases in iron castings and primary iron and steel and a less-than-seasonal reduction in machinery. Transportation equipment recorded a small increase between November

NOTE: Statistics are based on returns received from employers usually employing 15 or more persons. These returns include data for the last pay period(s) of reporting establishments in each month. the latest figures throughout this publication are subject to revision.

and December instead of the usual decline; a contra-seasonal rise in motor vehicle parts and accessories and a larger-than-seasonal increase in aircraft and parts accounted for much of the improvement.

The seasonally-adjusted index for non-durable goods manufacturing rose by 1.6 p.c. to 114.5 in December. The increase resulted from strengthening in nearly all component industry groups with the most significant improvement taking place in clothing and paper products. In clothing the usual November to December decline was partly modified by the settlement of a major industrial dispute in the knit goods industry; even allowing for this factor, however, employment was much improved over the month. Smaller-than-seasonal reductions in textile products and miscellaneous manufacturing industries indicated continued expansion in these industries. Only the relatively small petroleum and tobacco products industries did not strengthen over the month.

Non-Manufacturing Industries

The seasonally-adjusted index for forestry declined from November to December due, mainly, to a larger-than-seasonal reduction in Quebec. Mining was virtually unchanged as a slight weakening in fuels was offset by mild strengthening in metals. The adjusted index for construction rose by 2.6 p.c. to 128.3, largely as a result of a smaller-than-seasonal reduction in highway, bridge and street construction.

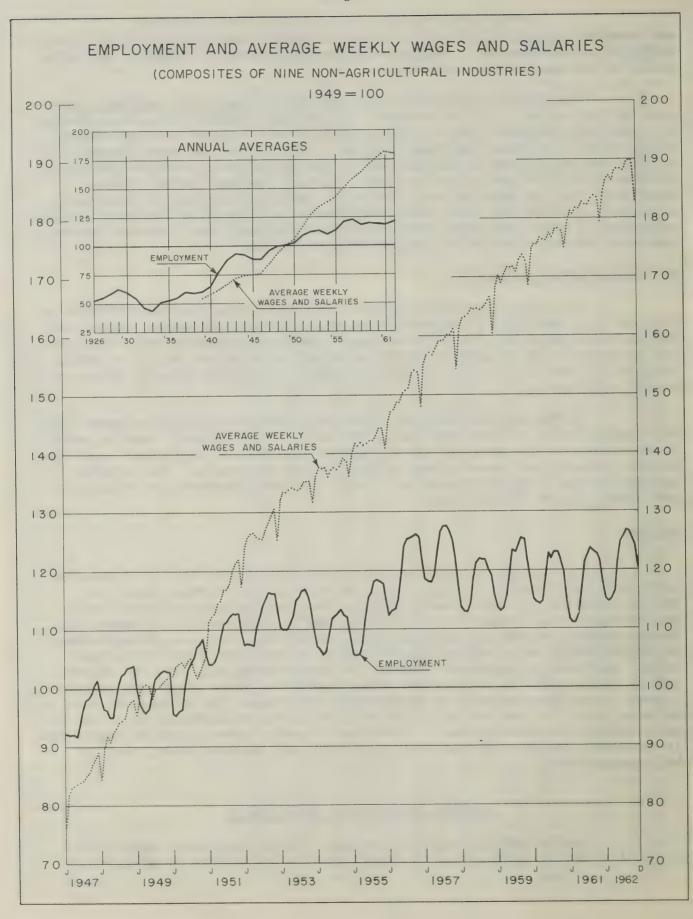

In the service-producing industrial divisions only the adjusted index for transportation, storage and communication rose significantly over the month. In that division, the strength was in water transportation; employment conditions in this industry have been buoyant during the past six months. The adjusted indexes for public utility operation, trade, finance, insurance and real estate and service showed little change.

Regions

The seasonally-adjusted indexes for all regions were up in December with gains approximating 2.0 p.c. being recorded in the Atlantic Region and British Columbia. In the Atlantic Region, the large increase resulted from a smaller-than-usual decline in manufacturing and an above-average increase in transportation, storage and communication. In Quebec, there was strengthening in manufacturing, construction, transportation, storage and communication and trade. In Ontario, expansion continued in manufacturing and there was improvement in transportation, storage and communication but these gains were offset to a large extent by slackening in construction and trade. The increase in the adjusted index for the Prairie region reflected smaller-than-usual decreases in manufacturing and construction. In British Columbia there was marked improvement in forestry, construction, manufacturing, trade and transportation, storage and communication.

AVERAGE WEEKLY WAGES AND SALARIES

The industrial composite average of weekly wages and salaries fell by \$2.84 to \$81.77 in December. A large reduction in December is usual since

the survey week is influenced by the year-end holidays. In the past decade per capita earnings declined by 1.6 p.c. to 2.7 p.c. when Christmas fell on Friday, Saturday, Sunday or Monday. On the other hand, when it occurred in mid-week the reductions ranged from 3.4 p.c. to 4.2 p.c. These differences are largely related to the amount of absenteeism before and after the paid holidays.

There are other factors in addition to the high incidence of absenteeism that account for the large year-end reductions. Many firms close down in the last week of December to take inventory or to adjust their production schedules. In addition, the relatively highly-paid construction and logging industries usually show proportionately greater reductions in employment than the average decrease for all industries; on the other hand, the relatively low-paid trade division usually shows a large increase in employment at this time.

General. - The monthly surveys of employment and weekly payrolls relate to all branches of the following industrial divisions: forestry, mining, manufacturing, transportation, storage and communication, construction, public utilities, trade, finance, insurance and real estate, and to certain groups of the service industry, mainly hotels, restaurants, laundries and dry cleaning plants, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, of which the number is very large in relation to their employment totals. Establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in most of the provinces and in the urban areas. The industrial representation, though large, is more uneven, the proportion of employees covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken, at place of residence. In 1951, data were not segregated for paid workers actually at work. Estimates of coverage that can be made are therefore conservative because they relate employees of reporting firms to all paid workers with jobs, including those absent from work without pay who would not be included in the monthly statistics of employment and payrolls. Estimates of coverage according to industrial divisions for Canada and the provinces are given in the first columns of Tables 3 and 4.

In these estimates, the Census figures for automobile repair have been moved from manufacturing to trade, since a large proportion of such work is carried on in retail establishments which do not furnish separate data for their sales and repair staffs.

In three industries (construction in Nova Scotia and New Brunswick, transportation in Manitoba and public utility operation in British Columbia) the provincial proportions exceed 100 p.c., due to classification differences between the Census and the monthly surveys of establishments. This situation in construction in two provinces is probably due to short-term employment afforded by reporting highway construction establishments to workers whose main occupation is farming, in which they would be enumerated by the Census. Inclusion of

some railway employees reported monthly in Manitoba, who were elsewhere enumerated in the Census, results in a proportion of over 100 p.c. in the transportation, storage and communication group in that province. The high figure in public utility operation in British Columbia is likely a result of inclusion of employees in that industry who would be shown in either construction or transportation by the Census.

The following table contains provincial estimates of coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are included. The general estimate for Canada was 62 p.c.

Estimated Provincial Coverage of all Paid Workers, June 1, 1951

Province	p.c.
Newfoundland	
Nova Scotia	51 50 62
Ontario	
Saskatchewan Alberta British Columbia	39 51 61

It is important to note that the statistics of employees covered, as published in the monthly and annual reports, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers in the indicated periods, including their full-time, part-time and casual employees.

2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months, with their payroll disbursements in the same periods. The request for statistics for the last pay period in the month only is designed to prevent duplication in the employment count where individuals may appear on the payrolls of more than one employer in a period of several weeks. The workers reported are not necessarily employed for a period of a week, by any one establishment or by more than one. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off without pay during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods—monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishment operated in the pay period; the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the cooperating firms.
- 4. The Tabulation. Data tabulated each month show the numbers of women and of workers of both sexes drawing pay from the establishments furnishing returns and their weekly payrolls, with similar information for employees of the same firms a month earlier, and in the base period (1949). The statistics first published for each month are preliminary; re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated and inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.—The index numbers of employment and payrolls represent the percentage relationships between employees of establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employees. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added

to the mailing list, are incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.

6. The Weekly Wages and Salaries. - The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays. sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to welfare funds such as workmen's compensation, pension, and unemployment insurance funds and supplementary unemployment benefits. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), and retirement gratuities.

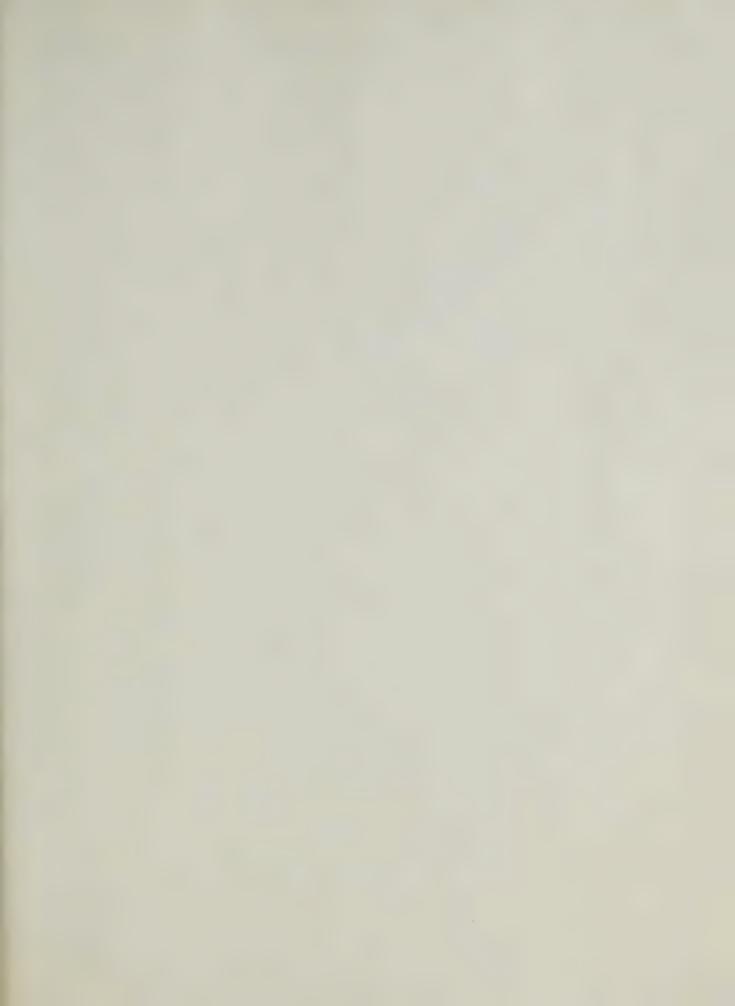

The revised figures of earnings in the monthly reports incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month.

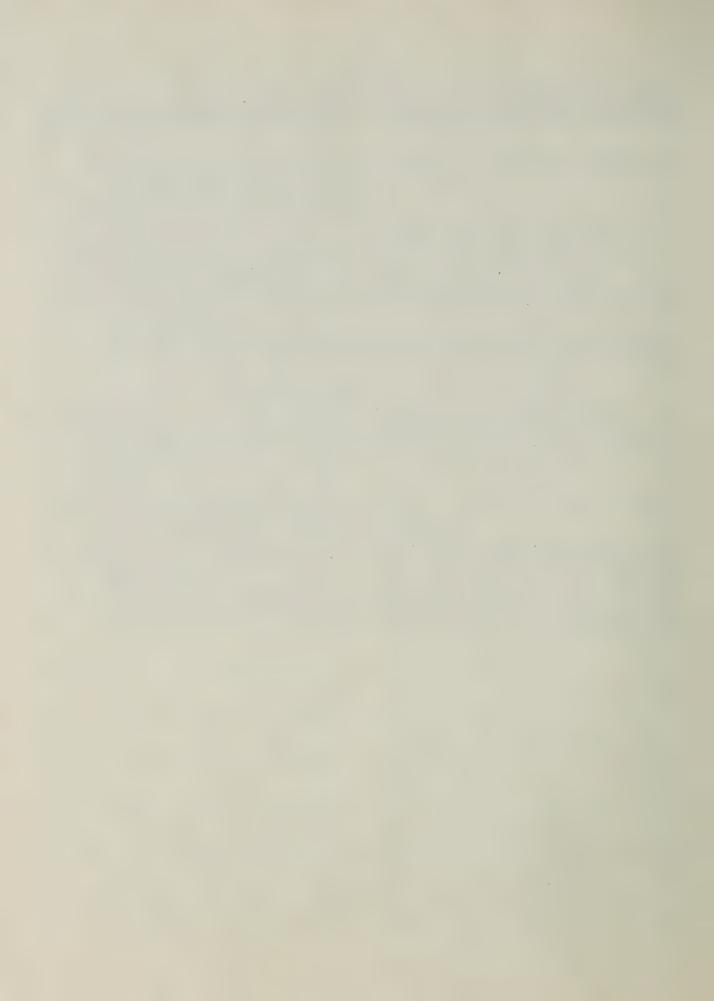

- 7. Hourly Earnings.—Statistics of average hours and average hourly and weekly earnings of wage-earners for whom co-operating employers keep record of hours worked are contained in the monthly reports "Man-Hours and Hourly Earnings".
- 8. Urban Area Statistics.—Urban area statistics published in the present report include data for establishments situated in the urban areas as defined in the 1956 Census Bulletin 1-6, "Population—Incorporated Cities, Towns and Villages," except that the St. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above—named publication include Preston with Galt.

FOOTNOTES

Most of the footnotes are lists of names of industries that appear in the Standard Industrial Classification Manual which are grouped under special titles in employment and payroll publications. In some industries, the group breakdown shown in the tables is less extensive than in the Standard Industrial Classification; figures for the omitted categories however, are contained in the group totals.

- (a) Gold mining includes alluvial gold mining; auriferous quartz mining.
- (b) Other metal mining includes copper-gold-silver mining; iron mining; nickel-copper mining; silver-cobalt mining; silver-lead-zinc mining; miscellaneous metal mining.
- (c) Non-metal mining includes non-metal mining; quarrying, clay and sand pits.
- (d) Other beverages includes carbonated beverages; wines.
- (f) Other leather products includes leather gloves and mittens; leather tanneries; miscellaneous leather products.
- (g) Saw and planing mills includes plywood and veneer mills; sash, door and planing mills; sawmills.
- (h) Other wood products includes boxes and baskets (wood); morticians' goods; miscellaneous wood products.
- (i) Other paper products includes paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Machinery manufacturing includes household, office and store machinery; machine tools; machinery, n.e.c.
- (k) Non-metallic mineral products includes abrasive products; asbestos products; cement, hydraulic; clay products; glass and glass products; lime and gypsum products; stone products; concrete products; miscellaneous non-metallic mineral products.
